

Anti-Murine IP-10 Antibody

Catalog # ABG10316

## Specification

## **Anti-Murine IP-10 Antibody - Product Information**

Application Reactivity Host Clonality WB, IHC, E Mouse Rabbit Polyclonal

## Anti-Murine IP-10 Antibody - Additional Information

#### Preparation

Produced from sera of rabbits pre-immunized with highly pure (>98%) recombinant mIP-10. Anti-Murine IP-10 specific antibody was purified by affinity chromatography employing immobilized mIP-10 matrix.

### WesternBlot

To detect mIP-10 by Western Blot analysis this antibody can be used at a concentration of 0.1-0.2  $\mu$ g/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant mIP-10 is 1.5-3.0 ng/lane, under either reducing or non-reducing conditions.

### Sandwich

To detect mIP-10 by sandwich ELISA (using 100  $\mu$ l/well antibody solution) a concentration of 0.5 - 2.0  $\mu$ g/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems' Biotinylated Anti-Murine IP-10 (61-081BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant mIP-10.

#### Immunohistochemistry

This antibody stained colchicine injected mouse brain (including the hippocampus region) tissue. The primary antibody was incubated at 1.0 mg/ml overnight at 4°C. This was followed by a peroxidase conjugated secondary antibody and then a fluorescein Tyramide Signal Amplification (TSA<sup>™</sup>) reagent. Optimal concentrations and conditions may vary.

#### Neutralization

To yield one-half maximal inhibition [<strong>ND</strong><span style="font-size: 16px;"><sub>50</sub></span>] of the biological activity of mIP-10 (100.0 ng/mI), a concentration of 10.0  $\mu$ g/ml of this antibody is required.

#### Formulation

A sterile filtered antibody solution was lyophilized from PBS, pH 7.2.

### Reconstitution

Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.

Storage -20°C

#### Precautions

Anti-Murine IP-10 Antibody is for research use only and not for use in diagnostic or therapeutic

procedures.

# Anti-Murine IP-10 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>
