Western blot analysis of BMP15 expression in HELA whole cell lysates (lane 1) and MCF-7 whole cell lysates (lane 2). BMP15 at 56KD was detected using rabbit anti- BMP15 Antigen Affinity

purified polyclonal antibody (Catalog # ABO11666) at 0.5 µg/mL. The blot was developed using chemiluminescence (ECL) method .

Anti-BMP15 Picoband Antibody - Background

Bone morphogenetic protein 15 is a protein that in humans is encoded by the BMP15 gene. It's mainly involved in folliculogenesis. The protein encoded by this gene is a member of the bone morphogenetic protein family which is part of the transforming growth factor-beta superfamily. The transforming growth factor-beta superfamily includes large families of growth and differentiation factors. It is thought that this protein may be involved in oocyte maturation and follicular development as a homodimer or by forming heterodimers with a related protein, Gdf9. Defects in this gene are the cause of ovarian dysgenesis 2.
