

ALK antibody

Rabbit Polyclonal Antibody Catalog # ABV10260

Specification

ALK antibody - Product Information

Application WB
Primary Accession Q9UM73
Reactivity Human
Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Calculated MW 176442

ALK antibody - Additional Information

Gene ID 238

Positive Control Jurkat cell lysate

Application & Usage Western blotting (0.5-4 μg/ml). However,

the optimal conditions should be

determined individually.

Other Names

ALK tyrosine kinase receptor (EC 2.7.10.1) (Anaplastic lymphoma kinase) (CD antigen CD246)

Target/Specificity

ALK

Antibody Form

Liquid

Appearance

Colorless liquid

Formulation

 $100 \mu g$ (0.5 mg/ml) rabbit anti-ALK polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 30% glycerol, 0.5% BSA, 0.01% thimerosal.

Handling

The antibody solution should be gently mixed before use.

Reconstitution & Storage

-20 °C

Background Descriptions

Precautions

ALK antibody is for research use only and not for use in diagnostic or therapeutic procedures.

ALK antibody - Protein Information

Name ALK {ECO:0000303|PubMed:9174053, ECO:0000312|HGNC:HGNC:427}

Function

Neuronal receptor tyrosine kinase that is essentially and transiently expressed in specific regions of the central and peripheral nervous systems and plays an important role in the genesis and differentiation of the nervous system (PubMed:11121404, PubMed:11387242, PubMed:16317043, PubMed:17274988, PubMed:30061385, PubMed:34646012, PubMed:34819673, Also acts as a key thinness protein involved in the resistance to weight gain: in hypothalamic neurons, controls energy expenditure acting as a negative regulator of white adipose tissue lipolysis and sympathetic tone to fine-tune energy homeostasis (By similarity). Following activation by ALKAL2 ligand at the cell surface, transduces an extracellular signal into an intracellular response (PubMed:30061385, PubMed:33411331, PubMed:33411331,

PubMed:34646012, PubMed:34819673).

In contrast, ALKAL1 is not a potent physiological ligand for ALK (PubMed:34646012).

Ligand-binding to the extracellular domain induces tyrosine kinase activation, leading to activation of the mitogen-activated protein kinase (MAPK) pathway (PubMed:34819673).

Phosphorylates almost exclusively at the first tyrosine of the Y-x-x-Y-Y motif (PubMed:15226403, PubMed:16878150). Induces tyrosine phosphorylation of CBL, FRS2, IRS1 and SHC1, as well as of the MAP kinases MAPK1/ERK2 and MAPK3/ERK1 (PubMed:<a href="http://www.uniprot.org/citations/15226403"

target="_blank">15226403, PubMed:16878150). ALK activation may also be regulated by pleiotrophin (PTN) and midkine (MDK) (PubMed:<a href="http://www.uniprot.org/citations/11278720"

target="_blank">11278720, PubMed:11809760, PubMed:12107166, PubMed:<a href="http://www.uniprot.org/citations/12122009"

target="_blank">12122009). PTN-binding induces MAPK pathway activation, which is important for the anti-apoptotic signaling of PTN and regulation of cell proliferation (PubMed:11278720, PubMed:11809760, PubMed:12107166). MDK-binding induces phosphorylation of the ALK target insulin receptor substrate (IRS1), activates

mitogen-activated protein kinases (MAPKs) and PI3-kinase, resulting also in cell proliferation induction (PubMed:<a href="http://www.uniprot.org/citations/12122009"

target="_blank">12122009). Drives NF-kappa-B activation, probably through IRS1 and the activation of the AKT serine/threonine kinase (PubMed:15226403, PubMed:16878150). Recruitment of IRS1 to activated ALK and the activation of NF-kappa-B are essential for the autocrine growth and survival signaling of MDK (PubMed:15226403, PubMed:16878150).

Cellular Location

Cell membrane; Single-pass type I membrane protein Note=Membrane attachment is essential for promotion of neuron-like differentiation and cell proliferation arrest through specific activation of the MAP kinase pathway.

Tissue Location

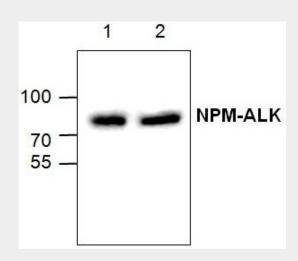

Expressed in brain and CNS. Also expressed in the small intestine and testis, but not in normal lymphoid cells

ALK antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

ALK antibody - Images

Western blot analysis of ALK expression in Jurkat cell lysate (Lane 1 & 2).

ALK antibody - Background

ALK (anaplastic lymphoma kinase) was originally discovered as a NPM (Nucleophosmin)-ALK fusion protein. The NPM-ALK is a constitutively active oncogenic tyrosine kinase associated with anaplastic lymphoma. Activation of PLCgamma by NPM-ALK has been s µggested as a crucial step for this lymphoma-associated oncogenic tyrosine kinase.
