

Thioredoxin 1 Antibody (3A1) Mouse Monoclonal Antibody Catalog # ABV11159

Specification

Thioredoxin 1 Antibody (3A1) - Product Information

Application Primary Accession Reactivity Host Clonality Isotype Calculated MW WB, E, IP <u>043396</u> Human Mouse Monoclonal Mouse IgG 1 32251

Thioredoxin 1 Antibody (3A1) - Additional Information

Gene ID 9352

Positive Control Application & Usage **Other Names** TXN, TRX, TRX1. WB analysis of cell lysates. Western blot: 1:1000, IP: 1-2 μl, ELISA.

Target/Specificity Thioredoxin 1

Antibody Form Liquid

Appearance Colorless liquid

Formulation 100 μl of antibody in HEPES with 0.15 M NaCl, 0.01 % BSA, 0.03 % sodium azide, and 50 % glycerol

Handling The antibody solution should be gently mixed before use.

Reconstitution & Storage -20 °C

Background Descriptions

Precautions Thioredoxin 1 Antibody (3A1) is for research use only and not for use in diagnostic or therapeutic procedures.

Thioredoxin 1 Antibody (3A1) - Protein Information

Name TXNL1

Synonyms TRP32, TXL, TXNL

Function Active thioredoxin with a redox potential of about -250 mV.

Cellular Location Cytoplasm. Nucleus. Note=At least 85% of the cellular TXNL1 is proteasome-associated

Tissue Location Ubiquitous.

Thioredoxin 1 Antibody (3A1) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- <u>Dot Blot</u>
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Thioredoxin 1 Antibody (3A1) - Background

The mammalian thioredoxin reductases (TrxRs) are a family of seleno-cysteine containing pyridine nucleotide-disulfide oxido-reductases. All the mammalian TrxRs are homologous to glutathione reductase with respect to primary structure including the conserved redox catalytic site (-Cys-Val-Asn-Val-Gly-Cys-) but distinctively with a C-terminal extension containing a catalytically active penultimate seleno-cysteine (SeCys) residue in the conserved sequence(-Gly-Cys-SeCys-Gly). TrxR is homodimeric protein in which each monomer includes an FAD prosthetic group, a NADPH binding site and a redox catalytic site. Electrons are transferred from NADPH via FAD and the active-site disulfide to C-terminal SeCys-containing redox center, which then reduces the substrate like thioredoxin. The members of TrxR family are 55 – 58 kDa in molecular size and composed of three isoforms including cytosolic TrxR1, mitochondrial TrxR2, and TrxR3, known as Trx and GSSG reductase (TGR). TrxR plays a key role in protection of cells against oxidative stress and redox-regulatory mechanism of transcription factors and various biological phenomena. TrxR1 plays a central role as a glucosyl donor in cellular metabolic pathways.
