

**Survivin Antibody**  
**Purified Rabbit Polyclonal Antibody**  
**Catalog # ABV11507****Specification**

---

**Survivin Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">O70201</a>
Other Accession	<a href="#">NP_033819</a>
Reactivity	Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	16298

**Survivin Antibody - Additional Information****Gene ID** 11799**Other Names**

BIRC5, IAP4 , API4, SVV , EPR-1

**Target/Specificity**

Survivin/TIAP

**Formulation**

100 µg (0.2 mg/ml) affinity-purified rabbit anti-Survivin polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 50% glycerol, 1% BSA, 0.02% sodium azide.

**Handling**

The antibody solution should be gently mixed before use.

**Background Descriptions****Precautions**

Survivin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Survivin Antibody - Protein Information****Name** Birc5**Synonyms** Api4, Iap4**Function**

Multitasking protein that has dual roles in promoting cell proliferation and preventing apoptosis (PubMed:&lt;a href="http://www.uniprot.org/citations/25778398" target="\_blank"&gt;25778398&lt;/a&gt;). Component of a chromosome passage protein complex (CPC) which is essential for chromosome

alignment and segregation during mitosis and cytokinesis (By similarity). Acts as an important regulator of the localization of this complex; directs CPC movement to different locations from the inner centromere during prometaphase to midbody during cytokinesis and participates in the organization of the center spindle by associating with polymerized microtubules (By similarity). Involved in the recruitment of CPC to centromeres during early mitosis via association with histone H3 phosphorylated at 'Thr-3' (H3pT3) during mitosis (By similarity). The complex with RAN plays a role in mitotic spindle formation by serving as a physical scaffold to help deliver the RAN effector molecule TPX2 to microtubules (By similarity). May counteract a default induction of apoptosis in G2/M phase (By similarity). The acetylated form represses STAT3 transactivation of target gene promoters (By similarity). May play a role in neoplasia. Inhibitor of CASP3 and CASP7 (By similarity). Essential for the maintenance of mitochondrial integrity and function (PubMed:<a href="http://www.uniprot.org/citations/25778398" target="\_blank">25778398</a>).

### Cellular Location

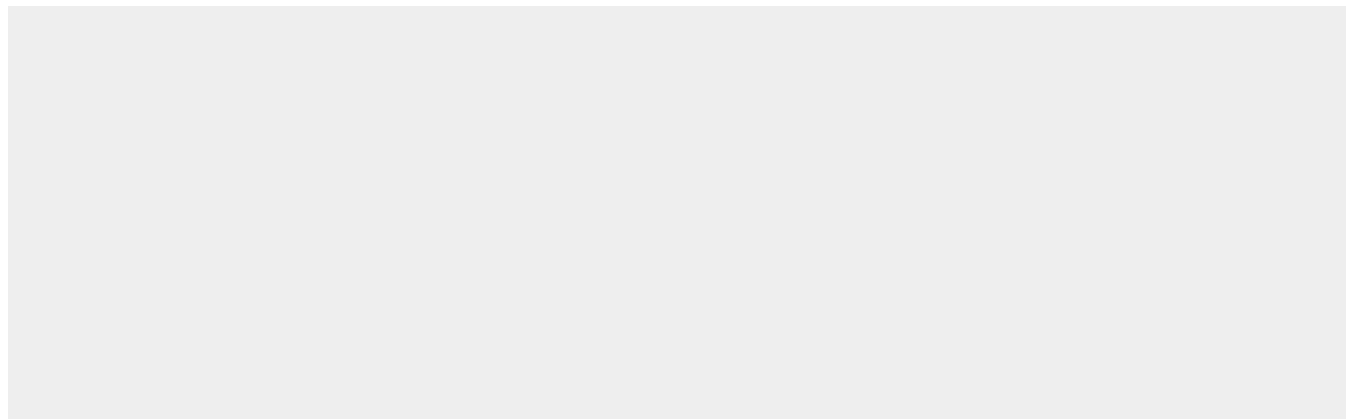

Cytoplasm {ECO:0000250|UniProtKB:O15392}. Nucleus {ECO:0000250|UniProtKB:O15392}. Chromosome {ECO:0000250|UniProtKB:O15392}. Chromosome, centromere {ECO:0000250|UniProtKB:O15392}. Cytoplasm, cytoskeleton, spindle {ECO:0000250|UniProtKB:O15392}. Chromosome, centromere, kinetochore {ECO:0000250|UniProtKB:O15392}. Midbody {ECO:0000250|UniProtKB:O15392} Note=Localizes at the centromeres from prophase to metaphase, at the spindle midzone during anaphase and at the midbody during telophase and cytokinesis. Accumulates in the nucleus upon treatment with leptomycin B (LMB), a XPO1/CRM1 nuclear export inhibitor (By similarity) Localizes on chromosome arms and inner centromeres from prophase through metaphase. Localizes to kinetochores in metaphase, distributes to the midzone microtubules in anaphase and at telophase, localizes exclusively to the midbody. Colocalizes with AURKB at mitotic chromosomes. Acetylation at Lys-129 directs its localization to the nucleus by enhancing homodimerization and thereby inhibiting XPO1/CRM1- mediated nuclear export (By similarity). {ECO:0000250|UniProtKB:E3SCZ8, ECO:0000250|UniProtKB:O15392}

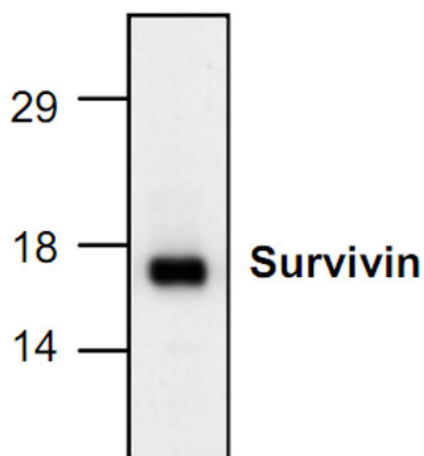

### Survivin Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

### **Survivin Antibody - Background**

Survivin is a newly described apoptosis inhibitor that is expressed in many human cancers, but undetectable in terminally differentiated adult tissues. It has been shown that recombinant expression of Survivin coneracts apoptosis of B lymphocyte precursors deprived of interleukin 3 (IL-3), suggesting a potential role of Survivin in cancer therapy. Survivin interacts with the processed form of caspase-3 and inhibits its proteolytic activity.
