

Phospho-GSK3 (Tyr216) polyconal antibody

Rabbit Polyclonal Antibody Catalog # ABV11747

Specification

Phospho-GSK3 (Tyr216) polyconal antibody - Product Information

Application WB, E
Primary Accession P49841
Reactivity Human
Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Calculated MW 46744

Phospho-GSK3 (Tyr216) polyconal antibody - Additional Information

Gene ID 2932

Application & Usage Western blot, Immunoblot: 0.5-2 µg/ml,

ELISA GSK3B

Alias Symbol
Other Names
GSK-3 beta, GSK3B

Appearance Colorless liquid

Formulation

100 ug (1mg/ml) of antibody in 0.01M Tris-HCl, pH 8.0, 0.15M NaCl, and 0.02% sodium azide.

Reconstitution & Storage -20 °C

Background Descriptions

Precautions

Phospho-GSK3 (Tyr216) polyconal antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Phospho-GSK3 (Tyr216) polyconal antibody - Protein Information

Name GSK3B (HGNC:4617)

Function

Constitutively active protein kinase that acts as a negative regulator in the hormonal control of glucose homeostasis, Wnt signaling and regulation of transcription factors and microtubules, by phosphorylating and inactivating glycogen synthase (GYS1 or GYS2), EIF2B, CTNNB1/beta-catenin,

```
APC, AXIN1, DPYSL2/CRMP2, JUN, NFATC1/NFATC, MAPT/TAU and MACF1 (PubMed:<a
href="http://www.uniprot.org/citations/1846781" target=" blank">1846781</a>, PubMed:<a
href="http://www.uniprot.org/citations/9072970" target="_blank">9072970</a>, PubMed:<a
href="http://www.uniprot.org/citations/14690523" target="_blank">14690523</a>, PubMed:<a
href="http://www.uniprot.org/citations/20937854" target="blank">20937854</a>, PubMed:<a
href="http://www.uniprot.org/citations/12554650" target="blank">12554650</a>, PubMed:<a
href="http://www.uniprot.org/citations/11430833" target=" blank">11430833</a>, PubMed:<a
href="http://www.uniprot.org/citations/16484495" target="blank">16484495</a>). Requires
primed phosphorylation of the majority of its substrates (PubMed: <a
href="http://www.uniprot.org/citations/11430833" target=" blank">11430833</a>, PubMed:<a
href="http://www.uniprot.org/citations/16484495" target="blank">16484495</a>). In skeletal
muscle, contributes to insulin regulation of glycogen synthesis by phosphorylating and inhibiting
GYS1 activity and hence glycogen synthesis (PubMed:<a
href="http://www.uniprot.org/citations/8397507" target=" blank">8397507</a>). May also
mediate the development of insulin resistance by regulating activation of transcription factors
(PubMed:<a href="http://www.uniprot.org/citations/8397507" target=" blank">8397507</a>).
Regulates protein synthesis by controlling the activity of initiation factor 2B (EIF2BE/EIF2B5) in the
same manner as glycogen synthase (PubMed: <a href="http://www.uniprot.org/citations/8397507"
target=" blank">8397507</a>). In Wnt signaling, GSK3B forms a multimeric complex with APC,
AXIN1 and CTNNB1/beta-catenin and phosphorylates the N-terminus of CTNNB1 leading to its
degradation mediated by ubiquitin/proteasomes (PubMed:<a
href="http://www.uniprot.org/citations/12554650" target=" blank">12554650</a>).
Phosphorylates JUN at sites proximal to its DNA-binding domain, thereby reducing its affinity for
DNA (PubMed: <a href="http://www.uniprot.org/citations/1846781"
target=" blank">1846781</a>). Phosphorylates NFATC1/NFATC on conserved serine residues
promoting NFATC1/NFATC nuclear export, shutting off NFATC1/NFATC gene regulation, and
thereby opposing the action of calcineurin (PubMed:<a
href="http://www.uniprot.org/citations/9072970" target=" blank">9072970</a>). Phosphorylates
MAPT/TAU on 'Thr-548', decreasing significantly MAPT/TAU ability to bind and stabilize
microtubules (PubMed:<a href="http://www.uniprot.org/citations/14690523"
target=" blank">14690523</a>). MAPT/TAU is the principal component of neurofibrillary tangles
in Alzheimer disease (PubMed:<a href="http://www.uniprot.org/citations/14690523"
target=" blank">14690523</a>). Plays an important role in ERBB2-dependent stabilization of
microtubules at the cell cortex (PubMed: <a href="http://www.uniprot.org/citations/20937854"
target=" blank">20937854</a>). Phosphorylates MACF1, inhibiting its binding to microtubules
which is critical for its role in bulge stem cell migration and skin wound repair (By similarity).
Probably regulates NF-kappa-B (NFKB1) at the transcriptional level and is required for the
NF-kappa-B-mediated anti- apoptotic response to TNF-alpha (TNF/TNFA) (By similarity). Negatively
regulates replication in pancreatic beta-cells, resulting in apoptosis, loss of beta-cells and diabetes
(By similarity). Through phosphorylation of the anti-apoptotic protein MCL1, may control cell
apoptosis in response to growth factors deprivation (By similarity). Phosphorylates MUC1 in breast
cancer cells, decreasing the interaction of MUC1 with CTNNB1/beta-catenin (PubMed: <a
href="http://www.uniprot.org/citations/9819408" target=" blank">9819408</a>). Is necessary for
the establishment of neuronal polarity and axon outgrowth (PubMed:<a
href="http://www.uniprot.org/citations/20067585" target=" blank">20067585</a>).
Phosphorylates MARK2, leading to inhibition of its activity (By similarity). Phosphorylates SIK1 at
'Thr-182', leading to sustainment of its activity (PubMed:<a
href="http://www.uniprot.org/citations/18348280" target=" blank">18348280</a>).
Phosphorylates ZC3HAV1 which enhances its antiviral activity (PubMed: <a
href="http://www.uniprot.org/citations/22514281" target=" blank">22514281</a>).
Phosphorylates SNAI1, leading to its BTRC-triggered ubiquitination and proteasomal degradation
(PubMed:<a href="http://www.uniprot.org/citations/15448698" target=" blank">15448698</a>,
PubMed: <a href="http://www.uniprot.org/citations/15647282" target=" blank">15647282</a>).
Phosphorylates SFPQ at 'Thr-687' upon T-cell activation (PubMed: <a
href="http://www.uniprot.org/citations/20932480" target=" blank">20932480</a>).
Phosphorylates NR1D1 st 'Ser-55' and 'Ser-59' and stabilizes it by protecting it from proteasomal
degradation. Regulates the circadian clock via phosphorylation of the major clock components
```

Tel: 858.875.1900 Fax: 858.875.1999

including BMAL1, CLOCK and PER2 (PubMed: 19946213, PubMed:28903391). Phosphorylates FBXL2 at 'Thr-404' and primes it for ubiquitination by the SCF(FBXO3) complex and proteasomal degradation (By similarity). Phosphorylates CLOCK AT 'Ser-427' and targets it for proteasomal degradation (PubMed: 19946213). Phosphorylates BMAL1 at 'Ser-17' and 'Ser-21' and primes it for ubiquitination and proteasomal degradation (PubMed: 28903391). Phosphorylates OGT at 'Ser-3' or 'Ser-4' which positively regulates its activity. Phosphorylates MYCN in neuroblastoma cells which may promote its degradation (PubMed: 24391509). Regulates the circadian rhythmicity of hippocampal long-term potentiation and BMAL1 and PER2 expression (By similarity). Acts as a regulator of autophagy by mediating phosphorylation of KAT5/TIP60 under starvation conditions, activating KAT5/TIP60 acetyltransferase activity and promoting acetylation of key autophagy regulators, such as ULK1 and RUBCNL/Pacer (PubMed:30704899). Negatively regulates extrinsic apoptotic signaling pathway via death domain receptors. Promotes the formation of an anti-apoptotic complex, made of DDX3X, BRIC2 and GSK3B, at death receptors, including TNFRSF10B. The anti-apoptotic function is most effective with weak apoptotic signals and can be overcome by stronger stimulation (PubMed: 18846110). Phosphorylates E2F1, promoting the interaction between E2F1 and USP11, stabilizing E2F1 and promoting its activity (PubMed: 17050006, PubMed:28992046). Phosphorylates mTORC2 complex component RICTOR at 'Thr-1695' which facilitates FBXW7-mediated ubiquitination and subsequent degradation of RICTOR (PubMed:25897075). Phosphorylates FXR1, promoting FXR1 ubiquitination by the SCF(FBXO4) complex and FXR1 degradation by the proteasome (By similarity). Phosphorylates interleukin-22 receptor subunit IL22RA1, preventing its proteasomal degradation (By similarity).

Cellular Location

Cytoplasm. Nucleus. Cell membrane. Note=The phosphorylated form shows localization to cytoplasm and cell membrane (PubMed:20937854). The MEMO1-RHOA-DIAPH1 signaling pathway controls localization of the phosphorylated form to the cell membrane (PubMed:20937854)

Tissue Location

Expressed in testis, thymus, prostate and ovary and weakly expressed in lung, brain and kidney. Colocalizes with EIF2AK2/PKR and TAU in the Alzheimer disease (AD) brain

Phospho-GSK3 (Tyr216) polyconal antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Phospho-GSK3 (Tyr216) polyconal antibody - Images

Phospho-GSK3 (Tyr216) polyconal antibody - Background

Glycogen synthase kinase 3 (GSK-3) is a serine/threonine protein kinase that has been implicated in the regulation of cell fate and in the Wnt signaling pathway. GSK-3 plays an important role in the PI3 kinase and Akt mediated cell survival pathways, and its activity can be inhibited by Akt-mediated phosphorylation at Ser21 of GSK-3 α and Ser9 of GSK-3 β . GSK-3 has also been implicated in alzheimer's disease. Six Tau protein isoforms have been identified, all of which are phosphorylated by GSK-3.
