

Anti-CIDEB Antibody

Catalog # ABV11962

Specification

Anti-CIDEB Antibody - Product Information

Application IHC, IF Primary Accession Q9UHD4

Reactivity Human, Mouse, Rat

Host Rabbit Isotype Rabbit IgG Calculated MW 24678

Anti-CIDEB Antibody - Additional Information

Gene ID 27141

Positive Control WB: HT29, RAW264.7, mouse spleen, rat

spleen lysate; IHC: human liver cancer

tissue, IF/IC: HT29 cells

Application & Usage WB; 1:500 - 1:2000, IH; 1:100 - 1:200,

IF/IC; 1:100 - 1:500

Other Names

Cell death activator CIDE-B; Cell death-inducing DFFA-like effector B

Target/Specificity

CIDEB

Antibody Form

Liquid

Appearance

Colorless liquid

Handling

The antibody solution should be gently mixed before use

Reconstitution & Storage

-20°C

Background Descriptions

Precautions

Anti-CIDEB Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Anti-CIDEB Antibody - Protein Information

Name CIDEB {ECO:0000303|PubMed:35939579, ECO:0000312|HGNC:HGNC:1977}

Function

Lipid transferase specifically expressed in hepatocytes, which promotes unilocular lipid droplet formation by mediating lipid droplet fusion (PubMed:35939579). Lipid droplet fusion promotes their enlargement, restricting lipolysis and favoring lipid storage (PubMed: 35939579). Localizes on the lipid droplet surface, at focal contact sites between lipid droplets, and mediates atypical lipid droplet fusion by promoting directional net neutral lipid transfer from the smaller to larger lipid droplets (By similarity). The transfer direction may be driven by the internal pressure difference between the contacting lipid droplet pair (By similarity). Promotes lipid exchange and lipid droplet fusion in both small and large lipid droplet-containing hepatocytes (By similarity). In addition to its role in lipid droplet fusion, also involved in cytoplasmic vesicle biogenesis and transport (By similarity). Required for very-low-density lipoprotein (VLDL) lipidation and maturation (By similarity). Probably involved in the biogenesis of VLDL transport vesicles by forming a COPII vesicle coat and facilitating the formation of endoplasmic reticulum-derived large vesicles (By similarity). Also involved in sterol-regulated export of the SCAP-SREBP complex, composed of SCAP, SREBF1/SREBP1 and SREBF2/SREBP2, by promoting loading of SCAP-SREBP into COPII vesicles (By similarity). May also activate apoptosis (PubMed:10619428).

Cellular Location

Lipid droplet. Endoplasmic reticulum membrane {ECO:0000250|UniProtKB:O70303}; Peripheral membrane protein {ECO:0000250|UniProtKB:O70303}; Cytoplasmic side {ECO:0000250|UniProtKB:O70303}. Golgi apparatus {ECO:0000250|UniProtKB:O70303}. Cytoplasmic vesicle, COPI-coated vesicle {ECO:0000250|UniProtKB:O70303}. Note=Enriched at lipid droplet contact sites. {ECO:0000250|UniProtKB:O70303}

Tissue Location

Highly expressed in liver and small intestine and, at lower levels, in colon, kidney and spleen

Anti-CIDEB Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Anti-CIDEB Antibody - Images
