

## Functional LTbetaR (mouse) Antibody, mAb (preservative free)

Catalog # ADP0021

### **Specification**

# Functional LTbetaR (mouse) Antibody, mAb (preservative free) - Product Information

Application FC Reactivity Mouse

Host Purified From Concentrated Hybridoma

**Tissue Culture Supernatant.** 

Clonality
Isotype
Gene Source
Application Note

Monoclonal
Rat IgG2a
Mouse
FC,Function

FC, Functional Application, Agonist

inducing BAFF, chemokines and integrins

in vitro and in vivo.

Description

The monoclonal antibody to mouse LTβR is an agonist that can be used for the

investigation of the regulation of BAFF (BlyS), chemokines and integrins using in

vivo and tissue culture models, the development of NK cells and NK T cells, to

study the regulation of NF-κB family of transcription factors in regulation of

inflammation and homeostasis, particularly RelB NF-κB2 pathway. For use as an agonist the MAb to LTβR is added to cell cultures at 2 μg/ml. For *in vivo* use, mice

are injected intraperitoneally with 50 μg of agonistic MAb to LTβR in sterile phosphate

saline buffer.

## Functional LTbetaR (mouse) Antibody, mAb (preservative free) - Additional Information

## **Other Names**

Lymphotoxin-β Receptor; Tumor Necrosis Factor Receptor 2 Related Protein; Tumor Necrosis Factor C Receptor; Tumor Necrosis Factor Receptor Superfamily Member 3; TNFRSF3

### Target/Specificity

Recognizes mouse LTβR.

#### **Format**

Liquid. In PBS containing 10% glycerol.

#### **Reconstitution & Storage**

Stable for at least 1 year after receipt when stored at -20°C.

### **Precautions**

Functional LTbetaR (mouse) Antibody, mAb (preservative free) is for research use only and not for use in diagnostic or therapeutic procedures.

## Functional LTbetaR (mouse) Antibody, mAb (preservative free) - Protein Information

# Functional LTbetaR (mouse) Antibody, mAb (preservative free) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Functional LTbetaR (mouse) Antibody, mAb (preservative free) - Background

The LT- $\beta$ -R activates two different NF-kappa pathways that lead to distinct patterns of gene induction, including selected chemokines and the cytokine BAFF, which is essential for the survival of mature B lymphocytes. LT- $\beta$ -R activates the classical NF-kappa (relA/p50) pathway, like the type 1 TNF receptor (TNFR1), that regulates proinflammatory genes, like the chemokine MIP1- $\beta$ -. However, LT- $\beta$ -R, unlike TNFR1, also activates the processing of p100 to form RelB/p52 complexes, which activate genes involved in lymphoid organ formation and lymphocyte survival.
