

**Goat Anti-APPL1 Antibody**  
**Peptide-affinity purified goat antibody**  
**Catalog # AF1091a**

**Specification**

---

**Goat Anti-APPL1 Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">O9UKG1</a>
Other Accession	<a href="#">NP_036228</a> , <a href="#">26060</a> , <a href="#">72993 (mouse)</a>
Predicted	Human, Mouse, Rat, Dog, Cow
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	79663

**Goat Anti-APPL1 Antibody - Additional Information**

**Gene ID** 26060

**Other Names**

DCC-interacting protein 13-alpha, Dip13-alpha, Adapter protein containing PH domain, PTB domain and leucine zipper motif 1, APPL1

**Format**

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

Goat Anti-APPL1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Goat Anti-APPL1 Antibody - Protein Information**

**Name** APPL1 ([HGNC:24035](#))

**Function**

Multifunctional adapter protein that binds to various membrane receptors, nuclear factors and signaling proteins to regulate many processes, such as cell proliferation, immune response, endosomal trafficking and cell metabolism (PubMed:<a href="http://www.uniprot.org/citations/26583432" target="\_blank">26583432</a>, PubMed:<a href="http://www.uniprot.org/citations/15016378" target="\_blank">15016378</a>, PubMed:<a href="http://www.uniprot.org/citations/26073777" target="\_blank">26073777</a>, PubMed:<a

[19661063](http://www.uniprot.org/citations/19661063), PubMed: [10490823](http://www.uniprot.org/citations/10490823)). Regulates signaling pathway leading to cell proliferation through interaction with RAB5A and subunits of the NuRD/MeCP1 complex (PubMed: [15016378](http://www.uniprot.org/citations/15016378)). Functions as a positive regulator of innate immune response via activation of AKT1 signaling pathway by forming a complex with APPL1 and PIK3R1 (By similarity). Inhibits Fc-gamma receptor-mediated phagocytosis through PI3K/Akt signaling in macrophages (By similarity). Regulates TLR4 signaling in activated macrophages (By similarity). Involved in trafficking of the TGFBR1 from the endosomes to the nucleus via microtubules in a TRAF6-dependent manner (PubMed: [26583432](http://www.uniprot.org/citations/26583432)). Plays a role in cell metabolism by regulating adiponectin and insulin signaling pathways (PubMed: [26073777](http://www.uniprot.org/citations/26073777), PubMed: [19661063](http://www.uniprot.org/citations/19661063), PubMed: [24879834](http://www.uniprot.org/citations/24879834)). Required for fibroblast migration through HGF cell signaling (By similarity). Positive regulator of beta-catenin/TCF-dependent transcription through direct interaction with RUVBL2/reptin resulting in the relief of RUVBL2-mediated repression of beta-catenin/TCF target genes by modulating the interactions within the beta-catenin-reptin-HDAC complex (PubMed: [19433865](http://www.uniprot.org/citations/19433865)).

#### Cellular Location

Early endosome membrane; Peripheral membrane protein. Nucleus. Cytoplasm. Endosome. Cell projection, ruffle {ECO:0000250|UniProtKB:Q8K3H0}. Cytoplasmic vesicle, phagosome {ECO:0000250|UniProtKB:Q8K3H0}. Note=Early endosomal membrane-bound and nuclear. Translocated into the nucleus upon release from endosomal membranes following internalization of EGF

#### Tissue Location

High levels in heart, ovary, pancreas and skeletal muscle.

### Goat Anti-APPL1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

### Goat Anti-APPL1 Antibody - Images

AF1091a (0.5 µg/ml) staining of 1) Rat Aortic Smooth Muscle cell lysate 2) after infection with Human APPL1 adenovirus for 48hrs. Detected by chemiluminescence. Data kindly provided by Dr. L. Jia, Ann Arbor, USA.

#### **Goat Anti-APPL1 Antibody - Background**

The protein encoded by this gene has been shown to be involved in the regulation of cell proliferation, and in the crosstalk between the adiponectin signalling and insulin signalling pathways. The encoded protein binds many other proteins, including RAB5A, DCC, AKT2, PIK3CA, adiponectin receptors, and proteins of the NuRD/MeCP1 complex. This protein is found associated with endosomal membranes, but can be released by EGF and translocated to the nucleus.
