

Goat Anti-COX2 / PTGS2 Antibody
Peptide-affinity purified goat antibody
Catalog # AF1271a**Specification**

Goat Anti-COX2 / PTGS2 Antibody - Product Information

Application	WB
Primary Accession	P35354
Other Accession	NP_000954 , 5743
Reactivity	Human
Predicted	Pig, Dog, Cow
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	68996

Goat Anti-COX2 / PTGS2 Antibody - Additional Information**Gene ID** 5743**Other Names**

Prostaglandin G/H synthase 2, 1.14.99.1, Cyclooxygenase-2, COX-2, PHS II, Prostaglandin H2 synthase 2, PGH synthase 2, PGHS-2, Prostaglandin-endoperoxide synthase 2, PTGS2, COX2

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-COX2 / PTGS2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-COX2 / PTGS2 Antibody - Protein Information**Name** PTGS2 ([HGNC:9605](#))**Function**

Dual cyclooxygenase and peroxidase in the biosynthesis pathway of prostanoids, a class of C20 oxylipins mainly derived from arachidonate ((5Z,8Z,11Z,14Z)-eicosatetraenoate, AA, C20:4(n-6)), with a particular role in the inflammatory response (PubMed:7947975, PubMed:7592599, PubMed:7592599)

[9261177](http://www.uniprot.org/citations/9261177), PubMed: [16373578](http://www.uniprot.org/citations/16373578), PubMed: [22942274](http://www.uniprot.org/citations/22942274), PubMed: [26859324](http://www.uniprot.org/citations/26859324), PubMed: [27226593](http://www.uniprot.org/citations/27226593), PubMed: [11939906](http://www.uniprot.org/citations/11939906), PubMed: [19540099](http://www.uniprot.org/citations/19540099)). The cyclooxygenase activity oxygenates AA to the hydroperoxy endoperoxide prostaglandin G2 (PGG2), and the peroxidase activity reduces PGG2 to the hydroxy endoperoxide prostaglandin H2 (PGH2), the precursor of all 2-series prostaglandins and thromboxanes (PubMed: [7947975](http://www.uniprot.org/citations/7947975), PubMed: [7592599](http://www.uniprot.org/citations/7592599), PubMed: [9261177](http://www.uniprot.org/citations/9261177), PubMed: [16373578](http://www.uniprot.org/citations/16373578), PubMed: [22942274](http://www.uniprot.org/citations/22942274), PubMed: [26859324](http://www.uniprot.org/citations/26859324), PubMed: [27226593](http://www.uniprot.org/citations/27226593)). This complex transformation is initiated by abstraction of hydrogen at carbon 13 (with S-stereochemistry), followed by insertion of molecular O2 to form the endoperoxide bridge between carbon 9 and 11 that defines prostaglandins. The insertion of a second molecule of O2 (bis-oxygenase activity) yields a hydroperoxy group in PGG2 that is then reduced to PGH2 by two electrons (PubMed: [7947975](http://www.uniprot.org/citations/7947975), PubMed: [7592599](http://www.uniprot.org/citations/7592599), PubMed: [9261177](http://www.uniprot.org/citations/9261177), PubMed: [16373578](http://www.uniprot.org/citations/16373578), PubMed: [22942274](http://www.uniprot.org/citations/22942274), PubMed: [26859324](http://www.uniprot.org/citations/26859324), PubMed: [27226593](http://www.uniprot.org/citations/27226593)). Similarly catalyzes successive cyclooxygenation and peroxidation of dihomo-gamma-linoleate (DGLA, C20:3(n-6)) and eicosapentaenoate (EPA, C20:5(n-3)) to corresponding PGH1 and PGH3, the precursors of 1- and 3- series prostaglandins (PubMed: [11939906](http://www.uniprot.org/citations/11939906), PubMed: [19540099](http://www.uniprot.org/citations/19540099)). In an alternative pathway of prostanoid biosynthesis, converts 2-arachidonoyl lysophospholipids to prostanoid lysophospholipids, which are then hydrolyzed by intracellular phospholipases to release free prostanoids (PubMed: [27642067](http://www.uniprot.org/citations/27642067)). Metabolizes 2-arachidonoyl glycerol yielding the glyceryl ester of PGH2, a process that can contribute to pain response (PubMed: [22942274](http://www.uniprot.org/citations/22942274)). Generates lipid mediators from n-3 and n-6 polyunsaturated fatty acids (PUFAs) via a lipoxygenase-type mechanism. Oxygenates PUFAs to hydroperoxy compounds and then reduces them to corresponding alcohols (PubMed: [11034610](http://www.uniprot.org/citations/11034610), PubMed: [11192938](http://www.uniprot.org/citations/11192938), PubMed: [9048568](http://www.uniprot.org/citations/9048568), PubMed: [9261177](http://www.uniprot.org/citations/9261177)). Plays a role in the generation of resolution phase interaction products (resolvins) during both sterile and infectious inflammation (PubMed: [12391014](http://www.uniprot.org/citations/12391014)). Metabolizes docosahexaenoate (DHA, C22:6(n-3)) to 17R-HDHA, a precursor of the D- series resolvins (RvDs) (PubMed: [12391014](http://www.uniprot.org/citations/12391014)). As a component of the biosynthetic pathway of E-series resolvins (RvEs), converts eicosapentaenoate (EPA, C20:5(n-3)) primarily to 18S-HEPE that is further metabolized by ALOX5 and LTA4H to generate 18S-RvE1 and 18S- RvE2 (PubMed: [21206090](http://www.uniprot.org/citations/21206090)). In vascular endothelial cells, converts docosapentaenoate (DPA, C22:5(n-3)) to 13R-HDPA, a precursor for 13-series resolvins (RvTs) shown to activate macrophage phagocytosis during bacterial infection (PubMed: [26236990](http://www.uniprot.org/citations/26236990)).

In activated leukocytes, contributes to oxygenation of hydroxyeicosatetraenoates (HETE) to diHETES (5,15-diHETE and 5,11-diHETE) (PubMed:22068350, PubMed:26282205). Can also use linoleate (LA, (9Z,12Z)- octadecadienoate, C18:2(n-6)) as substrate and produce hydroxyoctadecadienoates (HODEs) in a regio- and stereospecific manner, being (9R)-HODE ((9R)-hydroxy-(10E,12Z)-octadecadienoate) and (13S)- HODE ((13S)-hydroxy-(9Z,11E)-octadecadienoate) its major products (By similarity). During neuroinflammation, plays a role in neuronal secretion of specialized preresolving mediators (SPMs) 15R-lipoxin A4 that regulates phagocytic microglia (By similarity).

Cellular Location

Microsome membrane; Peripheral membrane protein. Endoplasmic reticulum membrane; Peripheral membrane protein. Nucleus inner membrane; Peripheral membrane protein. Nucleus outer membrane; Peripheral membrane protein. Note=Detected on the luminal side of the endoplasmic reticulum and nuclear envelope

Goat Anti-COX2 / PTGS2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Goat Anti-COX2 / PTGS2 Antibody - Images

AF1271a staining (0.5 µg/ml) of H460 lysate (RIPA buffer, 35 µg total protein per lane). Primary incubated for 1 hour. Detected by western blot using chemiluminescence.

Goat Anti-COX2 / PTGS2 Antibody - Background

Prostaglandin-endoperoxide synthase (PTGS), also known as cyclooxygenase, is the key enzyme in prostaglandin biosynthesis, and acts both as a dioxygenase and as a peroxidase. There are two isozymes of PTGS: a constitutive PTGS1 and an inducible PTGS2, which differ in their regulation of

expression and tissue distribution. This gene encodes the inducible isozyme. It is regulated by specific stimulatory events, suggesting that it is responsible for the prostanoid biosynthesis involved in inflammation and mitogenesis.
