

Catalog # AF1355a

Goat Anti-EGLN3 Antibody Peptide-affinity purified goat antibody

## Specification

# **Goat Anti-EGLN3 Antibody - Product Information**

Application Primary Accession Other Accession

Reactivity Predicted Host Clonality Concentration Isotype Calculated MW WB <u>Q9H6Z9</u> NP\_071356, <u>112399</u>, <u>112407 (mouse)</u>, <u>54702</u> (rat) Human Mouse, Rat, Dog, Cow Goat Polyclonal 100ug/200ul IgG 27261

# Goat Anti-EGLN3 Antibody - Additional Information

Gene ID 112399

**Other Names** 

Egl nine homolog 3, 1.14.11.29, HPH-1, Hypoxia-inducible factor prolyl hydroxylase 3, HIF-PH3, HIF-prolyl hydroxylase 3, HPH-3, Prolyl hydroxylase domain-containing protein 3, PHD3, EGLN3

Format

0.5 mg lgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** Goat Anti-EGLN3 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## **Goat Anti-EGLN3 Antibody - Protein Information**

Name EGLN3 {ECO:0000303|PubMed:16098468, ECO:0000312|HGNC:HGNC:14661}

Function

Prolyl hydroxylase that mediates hydroxylation of proline residues in target proteins, such as PKM, TELO2, ATF4 and HIF1A (PubMed:<a href="http://www.uniprot.org/citations/19584355" target="\_blank">19584355</a>, PubMed:<a href="http://www.uniprot.org/citations/21620138" target="\_blank">21620138</a>, PubMed:<a href="http://www.uniprot.org/citations/21483450"

target=" blank">21483450</a>, PubMed:<a href="http://www.uniprot.org/citations/22797300" target="blank">22797300</a>, PubMed:<a href="http://www.uniprot.org/citations/20978507" target="blank">20978507</a>, PubMed:<a href="http://www.uniprot.org/citations/21575608" target=" blank">21575608</a>). Target proteins are preferentially recognized via a LXXLAP motif. Cellular oxygen sensor that catalyzes, under normoxic conditions, the post-translational formation of 4- hydroxyproline in hypoxia-inducible factor (HIF) alpha proteins (PubMed:<a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target=" blank">12181324</a>). Hydroxylates a specific proline found in each of the oxygen-dependent degradation (ODD) domains (N- terminal, NODD, and C-terminal, CODD) of HIF1A (PubMed: <a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target="blank">12181324</a>). Also hydroxylates HIF2A (PubMed:<a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target=" blank">12181324</a>). Has a preference for the CODD site for both HIF1A and HIF2A (PubMed:<a href="http://www.uniprot.org/citations/11595184" target="\_blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target="\_blank">12181324</a>). Hydroxylation on the NODD site by EGLN3 appears to require prior hydroxylation on the CODD site (PubMed:<a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target=" blank">12181324</a>). Hydroxylated HIFs are then targeted for proteasomal degradation via the von Hippel-Lindau ubiguitination complex (PubMed:<a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target=" blank">12181324</a>). Under hypoxic conditions, the hydroxylation reaction is attenuated allowing HIFs to escape degradation resulting in their translocation to the nucleus, heterodimerization with HIF1B, and increased expression of hypoxy- inducible genes (PubMed: <a href="http://www.uniprot.org/citations/11595184" target=" blank">11595184</a>, PubMed:<a href="http://www.uniprot.org/citations/12181324" target=" blank">12181324</a>). ELGN3 is the most important isozyme in limiting physiological activation of HIFs (particularly HIF2A) in hypoxia. Also hydroxylates PKM in hypoxia, limiting glycolysis (PubMed: <a href="http://www.uniprot.org/citations/21620138" target=" blank">21620138</a>, PubMed:<a href="http://www.uniprot.org/citations/21483450" target=" blank">21483450</a>). Under normoxia, hydroxylates and regulates the stability of ADRB2 (PubMed:<a href="http://www.uniprot.org/citations/19584355" target=" blank">19584355</a>). Regulator of cardiomyocyte and neuronal apoptosis. In cardiomyocytes, inhibits the anti-apoptotic effect of BCL2 by disrupting the BAX-BCL2 complex (PubMed:<a href="http://www.uniprot.org/citations/20849813" target=" blank">20849813</a>). In neurons, has a NGF-induced proapoptotic effect, probably through regulating CASP3 activity (PubMed:<a href="http://www.uniprot.org/citations/16098468" target=" blank">16098468</a>). Also essential for hypoxic regulation of neutrophilic inflammation (PubMed: <a href="http://www.uniprot.org/citations/21317538" target=" blank">21317538</a>). Plays a crucial role in DNA damage response (DDR) by hydroxylating TELO2, promoting its interaction with ATR which is required for activation of the ATR/CHK1/p53 pathway (PubMed:<a href="http://www.uniprot.org/citations/22797300" target=" blank">22797300</a>). Also mediates hydroxylation of ATF4, leading to decreased protein stability of ATF4 (Probable).

**Cellular Location** 

Nucleus. Cytoplasm Note=Colocalizes with WDR83 in the cytoplasm {ECO:0000250|UniProtKB:Q62630}

#### **Tissue Location**

Widely expressed at low levels. Expressed at higher levels in adult heart (cardiac myocytes, aortic endothelial cells and coronary artery smooth muscle), lung and placenta, and in fetal spleen, heart and skeletal muscle. Also expressed in pancreas. Localized to pancreatic acini and islet cells.

## Goat Anti-EGLN3 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

## Goat Anti-EGLN3 Antibody - Images

250kDa 150kDa 100kDa 75kDa 50kDa 37kDa 25kDa 20kDa 15kDa

AF1355a (0.1  $\mu$ g/ml) staining of Human Muscle lysate (35  $\mu$ g protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.
