

Goat Anti-Monoamine Oxidase A Antibody
Peptide-affinity purified goat antibody
Catalog # AF1677a**Specification**

Goat Anti-Monoamine Oxidase A Antibody - Product Information

Application	WB
Primary Accession	P21397
Other Accession	NP_000231 , 4128
Reactivity	Human
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	59682

Goat Anti-Monoamine Oxidase A Antibody - Additional Information**Gene ID** 4128**Other Names**

Amine oxidase [flavin-containing] A, 1.4.3.4, Monoamine oxidase type A, MAO-A, MAOA

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-Monoamine Oxidase A Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-Monoamine Oxidase A Antibody - Protein Information**Name** MAOA ([HGNC:6833](#))**Function**

Catalyzes the oxidative deamination of primary and some secondary amine such as neurotransmitters, with concomitant reduction of oxygen to hydrogen peroxide and has important functions in the metabolism of neuroactive and vasoactive amines in the central nervous system and peripheral tissues (PubMed: [20493079](http://www.uniprot.org/citations/20493079), PubMed: [8316221](http://www.uniprot.org/citations/8316221), PubMed: [18391214](http://www.uniprot.org/citations/18391214), PubMed: [24169519](http://www.uniprot.org/citations/24169519))

target="_blank">24169519). Preferentially oxidizes serotonin (PubMed:20493079, PubMed:24169519). Also catalyzes the oxidative deamination of kynuramine to 3-(2-aminophenyl)-3-oxopropanal that can spontaneously condense to 4-hydroxyquinoline (By similarity).

Cellular Location

Mitochondrion outer membrane {ECO:0000250|UniProtKB:P21396}; Single-pass type IV membrane protein {ECO:0000250|UniProtKB:P21396}; Cytoplasmic side {ECO:0000250|UniProtKB:P21396}

Tissue Location

Heart, liver, duodenum, blood vessels and kidney.

Goat Anti-Monoamine Oxidase A Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Goat Anti-Monoamine Oxidase A Antibody - Images

AF1677a (0.3 µg/ml) staining of human heart lysate (35 µg protein in RIPA buffer) with (B) and without (A) blocking with the immunising peptide. Primary incubation was 1 hour. Detected by chemiluminescence.

HEK293 overexpressing MAOA (RC207276) and probed with AF1677a (mock transfection in first lane), tested by Origene.

Goat Anti-Monoamine Oxidase A Antibody - Background

This gene encodes monoamine oxidase A, an enzyme that degrades amine neurotransmitters, such as dopamine, norepinephrine, and serotonin. The protein localizes to the mitochondrial outer membrane. The gene is adjacent to a related gene on the opposite strand of chromosome X. Mutation in this gene results in monoamine oxidase deficiency, or Brunner syndrome.
