

Goat Anti-TBPL1 / TLF / TRF2 Antibody
Peptide-affinity purified goat antibody
Catalog # AF2070a**Specification**

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Product Information

Application	WB
Primary Accession	P62380
Other Accession	NP_004856 , 9519 , 237336 (mouse)
Reactivity	Human
Predicted	Mouse, Rat, Dog, Cow
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	20887

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Additional Information**Gene ID** 9519**Other Names**

TATA box-binding protein-like protein 1, TBP-like protein 1, 21 kDa TBP-like protein, Second TBP of unique DNA protein, STUD, TATA box-binding protein-related factor 2, TBP-related factor 2, TBP-like factor, TBP-related protein, TBPL1, TLF, TLP, TLP21, TRF2, TRP

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-TBPL1 / TLF / TRF2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Protein Information**Name** TBPL1**Synonyms** TLF, TLP, TLP21, TRF2, TRP**Function**

Part of a specialized transcription system that mediates the transcription of most ribosomal proteins through the 5'-TCT-3' motif which is a core promoter element at these genes. Seems to

also mediate the transcription of NF1. Does not bind the TATA box.

Cellular Location

Cytoplasm. Nucleus.

Tissue Location

Ubiquitously expressed, with highest levels in the testis and ovary.

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Images

AF2070a staining (2 µg/ml) of Jurkat lysate (RIPA buffer, 30 µg total protein per lane). Primary incubated for 1 hour. Detected by western blot using chemiluminescence.

Goat Anti-TBPL1 / TLF / TRF2 Antibody - Background

Initiation of transcription by RNA polymerase II requires the activities of more than 70 polypeptides. The protein that coordinates these activities is transcription factor IID (TFIID), which binds to the core promoter to position the polymerase properly, serves as the scaffold for assembly of the remainder of the transcription complex, and acts as a channel for regulatory signals. TFIID is composed of the TATA-binding protein (TBP) and a group of evolutionarily conserved proteins known as TBP-associated factors or TAFs. TAFs may participate in basal transcription, serve as coactivators, function in promoter recognition or modify general transcription factors (GTFs) to facilitate complex assembly and transcription initiation. This gene encodes a protein that serves the same function as TBP and substitutes for TBP at some promoters that are not recognized by TFIID. It

is essential for spermiogenesis and believed to be important in expression of developmentally regulated genes.
