

## **DNAJC6 Antibody (internal region)**

Peptide-affinity purified goat antibody Catalog # AF3014a

## **Specification**

## **DNAJC6 Antibody (internal region) - Product Information**

Application

Primary Accession <u>075061</u>

Other Accession NP 055602.1, 9829, 72685 (mouse), 313409

<u>(rat)</u>

Predicted Human, Mouse, Rat, Pig, Dog, Cow

Host Goat
Clonality Polyclonal
Concentration 0.5 mg/ml
Isotype IgG
Calculated MW 99997

# DNAJC6 Antibody (internal region) - Additional Information

#### **Gene ID 9829**

#### **Other Names**

Putative tyrosine-protein phosphatase auxilin, 3.1.3.48, DnaJ homolog subfamily C member 6, DNAJC6, KIAA0473

#### **Format**

0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

## **Precautions**

DNAJC6 Antibody (internal region) is for research use only and not for use in diagnostic or therapeutic procedures.

## DNAJC6 Antibody (internal region) - Protein Information

# Name DNAJC6 (HGNC:15469)

# **Function**

May act as a protein phosphatase and/or a lipid phosphatase. Co-chaperone that recruits HSPA8/HSC70 to clathrin-coated vesicles (CCVs) and promotes the ATP-dependent dissociation of clathrin from CCVs and participates in clathrin-mediated endocytosis of synaptic vesicles and their recycling and also in intracellular trafficking (PubMed:<a

href="http://www.uniprot.org/citations/18489706" target="\_blank">18489706</a>). Firstly, binds tightly to the clathrin cages, at a ratio of one DNAJC6 per clathrin triskelion. The HSPA8:ATP

complex then binds to the clathrin-auxilin cage, initially at a ratio of one HSPA8 per triskelion leading to ATP hydrolysis stimulation and causing a conformational change in the HSPA8. This cycle is repeated three times to drive to a complex containing the clathrin-auxilin cage associated to three HSPA8:ADP complex. The ATP hydrolysis of the third HSPA8:ATP complex leads to a concerted dismantling of the cage into component triskelia. Then, dissociates from the released triskelia and be recycled to initiate another cycle of HSPA8's recruitment. Also acts during the early steps of clathrin-coated vesicle (CCV) formation through its interaction with the GTP bound form of DNM1 (By similarity).

#### **Cellular Location**

Cytoplasmic vesicle, clathrin-coated vesicle {ECO:0000250|UniProtKB:Q27974}. Note=Appears on coated vesicles in successive transient bursts, immediately after the vesicle release from the plasma membrane. Recruitment to clathrin-coated vesicles depends on temporal variations in phosphoinositide composition of clathrin-coated vesicles. {ECO:0000250|UniProtKB:Q27974}

#### **Tissue Location**

Expressed in various brain regions, including cerebellum, corpus callosum, cortex, striatum, brainstem, pons, putamen, spinal cord and substantia nigra. Very low expression in non-neural tissues such as leukocytes, liver, adipose tissue, skeletal muscle and bone marrow.

## DNAJC6 Antibody (internal region) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cvtometv
- Cell Culture
