CCP4 (aa748-761) Antibody (internal region) - Protein Information**Name** AGBL1 ([HGNC:26504](#))**Function**

Metalloprotease that mediates deglutamylation of tubulin and non-tubulin target proteins. Catalyzes the removal of polyglutamate side chains present on the gamma-carboxyl group of glutamate residues within the C-terminal tail of tubulin protein. Specifically cleaves tubulin long-side-chains, while it is not able to remove the branching point glutamate. Also catalyzes the removal of polyglutamate residues from the carboxy-terminus of non-tubulin proteins such as MYLK.

Cellular Location

Cytoplasm, cytosol.

Tissue Location

Expressed in corneal endothelium.
