# Contactin 6 / NB-3 (mouse aa160-172) Antibody (internal region) - Protein Information

## Name CNTN6

#### **Function**

Contactins mediate cell surface interactions during nervous system development. Participates in oligodendrocytes generation by acting as a ligand of NOTCH1. Its association with NOTCH1 promotes NOTCH1 activation through the released notch intracellular domain (NICD) and subsequent translocation to the nucleus. Involved in motor coordination (By similarity).

### **Cellular Location**

Cell membrane; Lipid-anchor, GPI- anchor

## **Tissue Location**

Expressed in nervous system. Highly expressed in cerebellum. Expressed at intermediate level in thalamus, subthalamic nucleus. Weakly expressed in corpus callosum, caudate nucleus and spinal cord
