## Goat Anti-CD74 Antibody (internal region) - Additional Information

## Gene ID 972

Other Names
CD74; DHLAG; HLADG; Ia-GAMMA; CD74 molecule, major histocompatibility complex, class II invariant chain; CD74 antigen; CD74 antigen (invariant polypeptide of major histocompatibility complex, class II antigen-associated); HLA-DR-gamma; la-associated invariant chain; MHC HLA-DR gamma chain; gamma chain of class II antigens

## Format

Supplied at $0.5 \mathrm{mg} / \mathrm{ml}$ in Tris saline, $0.02 \%$ sodium azide, pH 7.3 with $0.5 \%$ bovine serum albumin. Aliquot and store at $-20^{\circ} \mathrm{C}$. Minimize freezing and thawing.

## Immunogen

Peptide with sequence C-KGSFPENLRHLKN, from the internal region of the protein sequence according to NP_001020330.1; NP_004346.1.

## Storage

Maintain refrigerated at $2-8^{\circ} \mathrm{C}$ for up to 6 months. For long term storage store at $-20^{\circ} \mathrm{C}$ in small aliquots to prevent freeze-thaw cycles.

## Precautions

Goat Anti-CD74 Antibody (internal region) is for research use only and not for use in diagnostic or therapeutic procedures.

## Goat Anti-CD74 Antibody (internal region) - Protein Information

Name CD74 (HGNC:1697)
Synonyms DHLAG

## Function

Plays a critical role in MHC class II antigen processing by stabilizing peptide-free class II alpha/beta heterodimers in a complex soon after their synthesis and directing transport of the complex from the endoplasmic reticulum to the endosomal/lysosomal system where the antigen processing and binding of antigenic peptides to MHC class II takes place. Serves as cell surface receptor for the cytokine MIF. [Isoform p41]: Stabilizes the conformation of mature CTSL by binding to its active site and serving as a chaperone to help maintain a pool of mature enzyme in endocytic compartments and extracellular space of antigen-presenting cells (APCs). Has antiviral activity by stymieing the endosomal entry of Ebola virus and coronaviruses, including SARS-CoV-2 (PubMed:<a href="http://www.uniprot.org/citations/32855215" target="_blank">32855215</a>). Disrupts cathepsin-mediated Ebola virus glycoprotein processing, which prevents viral fusion and entry. This antiviral activity is specific to p41 isoform (PubMed:<a
href="http://www.uniprot.org/citations/32855215" target="_blank">32855215</a>).

## Cellular Location

Cell membrane; Single-pass type II membrane protein. Endoplasmic reticulum membrane. Golgi apparatus, trans-Golgi network. Endosome. Lysosome. Secreted. Note=Transits through a number of intracellular compartments in the endocytic pathway. It can either undergo proteolysis or reach the cell membrane

## Tissue Location

Detected in urine (at protein level). [Isoform p33]: In B cells, represents 70\% of total CD74 expression.

## Goat Anti-CD74 Antibody (internal region) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Goat Anti-CD74 Antibody (internal region) - Images

AF4182a ( $0.01 \mu \mathrm{~g} / \mathrm{ml}$ ) staining of Human Tonsil lysate ( $35 \mu \mathrm{~g}$ protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.
