

Rabies Virus Antibody - With BSA and Azide
Mouse Monoclonal Antibody [Clone Rab-50]
Catalog # AH12897**Specification**

Rabies Virus Antibody - With BSA and Azide - Product Information

Application	,3,8,10,
Host	Mouse
Clonality	Monoclonal
Isotype	Mouse / IgG2b, kappa
Calculated MW	Not Known KDa

Rabies Virus Antibody - With BSA and Azide - Additional Information**Storage**

Store at 2 to 8°C. Antibody is stable for 24 months.

Precautions

Rabies Virus Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

Rabies Virus Antibody - With BSA and Azide - Protein Information**Rabies Virus Antibody - With BSA and Azide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Rabies Virus Antibody - With BSA and Azide - Images**Rabies Virus Antibody - With BSA and Azide - Background**

Reacts with viral glycoprotein of rabies virus strains SAD-Vnukovo and Pitman-Moore. This MAb is useful in detecting rabies virus by ELISA and Western. It is capable of neutralizing rabies virus. Rabies virus (Neurotropic virus) is a member of the Rhabdoviridae family. Rabies is a single stranded, neurotropic, negative sense RNA virus which encodes 5 proteins: a glycoprotein, a nucleoprotein, and three others. The mature virus has a bullet shape, a protein coat, and a lipid envelope. The outer surface of the virus is covered with thumb like glycoprotein projections 5-10 nm long and 3 nm in diameter. The virus averages approximately 780 nm in length. Lipid solvents

destroy virus infectivity. Rabies virus is a very successful virus, with a very wide range of hosts. It causes an acute, central nervous system infection, characterized by CNS irritation, followed by paralysis and death. Approximately 50,000 human deaths each year are caused by rabies.
