

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide Mouse Monoclonal Antibody [Clone 85-2C8] Catalog # AH13048

Specification

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Product Information

Application Host Clonality Isotype Calculated MW ,14,3,4, Mouse Monoclonal Mouse / IgG1 Depends on the target KDa

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Additional Information

Storage Store at 2 to 8°C.Antibody is stable for 24 months.

Precautions

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Protein Information

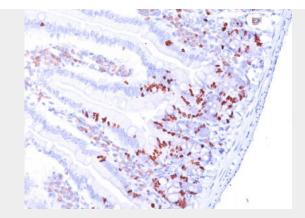

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Images

Formalin-fixed, paraffin-embedded Mouse Small Intestine stained with BrdU Monoclonal Antibody (85-2C8).

Bromodeoxyuridine (BrdU) (Proliferation Marker) Antibody - With BSA and Azide - Background

It reacts with Bromodeoxyuridine (BrdU) in single stranded DNA (produced by partial denaturation of double stranded DNA), BrdU coupled to a protein carrier, as well as free BrdU. BrdU is a thymidine analog, incorporated into cell nuclei during DNA synthesis prior to mitosis. Antibody to BrdU is helpful in detecting S-phase cells, providing useful information on the aggressiveness of tumors.
