Hes6 Antibody - middle region - Protein Information

Name Hes6 {ECO:0000312|EMBL:BAA96081.1}

Function

Does not bind DNA itself but suppresses both HES1-mediated N box-dependent transcriptional repression and binding of HES1 to E box sequences. Also suppresses HES1-mediated inhibition of the heterodimer formed by ASCL1/MASH1 and TCF3/E47, allowing ASCL1 and TCF3 to up- regulate transcription in its presence. Promotes cell differentiation.

Cellular Location

Nucleus.

Tissue Location

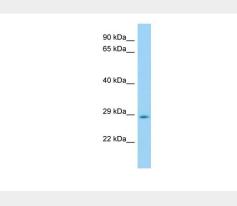

Expressed in both undifferentiated and differentiated cells. High levels of expression are observed in several embryonic tissues including the nervous system, muscle and thymus. In the nervous system, initially expressed in the closing neural tube, then in the spinal cord, cranial and dorsal root ganglia, and brain neuroepithelium. Also expressed in epithelial cells of the embryonic respiratory, urinary and digestive systems. In the limb buds, expressed in skeletal muscle and presumptive tendons
