

# VPS41 antibody - middle region

Rabbit Polyclonal Antibody Catalog # Al12227

# **Specification**

## VPS41 antibody - middle region - Product Information

Application WB
Primary Accession P49754

Other Accession NM 080631, NP 542198

Reactivity Human, Mouse, Rat, Rabbit, Horse, Bovine,

Guinea Pig, Dog

Predicted Human, Mouse, Rat, Rabbit, Pig, Chicken,

Horse, Bovine, Guinea Pig, Dog

Host Rabbit
Clonality Polyclonal
Calculated MW 96kDa KDa

# VPS41 antibody - middle region - Additional Information

**Gene ID 27072** 

Alias Symbol HVPS41, HVSP41, hVps41p

**Other Names** 

Vacuolar protein sorting-associated protein 41 homolog, S53, VPS41

#### **Format**

Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium azide and 2% sucrose.

### **Reconstitution & Storage**

Add 50 ul of distilled water. Final anti-VPS41 antibody concentration is 1 mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at 20°C. Avoid repeat freeze-thaw cycles.

#### **Precautions**

VPS41 antibody - middle region is for research use only and not for use in diagnostic or therapeutic procedures.

## VPS41 antibody - middle region - Protein Information

### Name VPS41

#### **Function**

Plays a role in vesicle-mediated protein trafficking to lysosomal compartments including the endocytic membrane transport and autophagic pathways. Believed to act in part as a core component of the putative HOPS endosomal tethering complex is proposed to be involved in the Rab5-to-Rab7 endosome conversion probably implicating MON1A/B, and via binding SNAREs and SNARE complexes to mediate tethering and docking events during SNARE-mediated membrane fusion. The HOPS complex is proposed to be recruited to Rab7 on the late endosomal membrane and to regulate late endocytic, phagocytic and autophagic traffic towards lysosomes (PubMed:<a

href="http://www.uniprot.org/citations/23351085" target="\_blank">23351085</a>, PubMed:<a href="http://www.uniprot.org/citations/33851776" target="\_blank">33851776</a>). Involved in homotypic vesicle fusions between late endosomes and in heterotypic fusions between late endosomes and lysosomes implicated in degradation of endocytosed cargo (PubMed:<a href="http://www.uniprot.org/citations/9159129" target="\_blank">9159129</a>, PubMed:<a href="http://www.uniprot.org/citations/23167963" target="\_blank">23167963</a>, PubMed:<a href="http://www.uniprot.org/citations/25445562" target="\_blank">25445562</a>, PubMed:<a href="http://www.uniprot.org/citations/25908847" target="\_blank">25908847</a>). Required for fusion of autophagosomes with lysosomes (PubMed:<a

href="http://www.uniprot.org/citations/25783203" target="\_blank">25783203</a>). Links the HOPS complex to endosomal Rab7 via its association with RILP and to lysosomal membranes via its association with ARL8B, suggesting that these interactions may bring the compartments to close proximity for fusion (PubMed:<a href="http://www.uniprot.org/citations/25445562" target="\_blank">25445562" target="\_blank">25445562</a>, PubMed:<a href="http://www.uniprot.org/citations/25908847" target="\_blank">25908847</a>, PubMed:<a href="http://www.uniprot.org/citations/21802320" target="\_blank">21802320</a>). Involved in the direct trans-Golgi network to late endosomes transport of lysosomal membrane proteins independently of HOPS (PubMed:<a href="http://www.uniprot.org/citations/23322049" target="\_blank">23322049</a>). Involved in sorting to the regulated secretory pathway presumably implicating the AP-3 adapter complex (By similarity). May play a role in HOPS-independent function in the regulated secretory pathway (PubMed:<a href="http://www.uniprot.org/citations/24210660" target="blank">24210660</a>).

#### **Cellular Location**

Endosome membrane; Peripheral membrane protein. Late endosome membrane; Peripheral membrane protein. Early endosome membrane; Peripheral membrane protein. Lysosome membrane; Peripheral membrane protein. Golgi apparatus, trans- Golgi network. Cytoplasmic vesicle, clathrin-coated vesicle. Cytoplasm, cytosol

#### **Tissue Location**

Expressed in cerebral cortex and cerebellum. Highly expressed in Purkinje cells.

### VPS41 antibody - middle region - Protocols

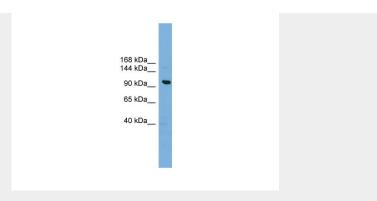

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
