GPR1 Antibody (C-Terminus) - Protein Information**Name** CMKLR2 ([HGNC:4463](#))**Function**

Receptor for chemoattractant adipokine chemerin/RARRES2 suggesting a role for this receptor in the regulation of inflammation and energy homeostasis (PubMed:18165312, PubMed:27716822). Signals mainly via beta-arrestin pathway. Binding of RARRES2 activates weakly G proteins, calcium mobilization and MAPK1/MAPK3 (ERK1/2) phosphorylation too (PubMed:27716822). Acts also as a receptor for TAFA1, mediates its effects on neuronal stem-cell proliferation and differentiation via the activation of ROCK/ERK and ROCK/STAT3 signaling pathway (By similarity).

Cellular Location

Cell membrane; Multi-pass membrane protein. Note=Internalizes in presence of its ligand, TAFA1

(By similarity). Internalizes efficiently in response to RARRES2 (PubMed:27716822)
