SERPINA1 / Alpha 1 Antitrypsin Antibody
Rabbit Polyclonal Antibody
Catalog # ALS11357

Specification

SERPINA1 / Alpha 1 Antitrypsin Antibody - Product Information

Application	**IHC**
Primary Accession	P01009
Reactivity	**Human**
Host	**Rabbit**
Clonality	**Polyclonal**
Calculated MW	**47kDa KDa**

SERPINA1 / Alpha 1 Antitrypsin Antibody - Additional Information

Gene ID 5265

Other Names
Alpha-1-antitrypsin, Alpha-1 protease inhibitor, Alpha-1-antiproteinase, Serpin A1, Short peptide from AAT, SPAAT, SERPINA1, AAT, PI

Target/Specificity
Human Alpha-1-anti-Trypsin.

Reconstitution & Storage
+4°C or -20°C, Avoid repeated freezing and thawing.

Precautions
SERPINA1 / Alpha 1 Antitrypsin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

SERPINA1 / Alpha 1 Antitrypsin Antibody - Protein Information

Name SERPINA1 (HGNC:8941)

Synonyms AAT, PI

Function
Inhibitor of serine proteases. Its primary target is elastase, but it also has a moderate affinity for plasmin and thrombin. Irreversibly inhibits trypsin, chymotrypsin and plasminogen activator. The aberrant form inhibits insulin-induced NO synthesis in platelets, decreases coagulation time and has proteolytic activity against insulin and plasmin.

Cellular Location
Secreted. Endoplasmic reticulum. Note=The S and Z allele are not secreted effectively and accumulate intracellularly in the endoplasmic reticulum

Tissue Location

Ubiquitous. Expressed in leukocytes and plasma.

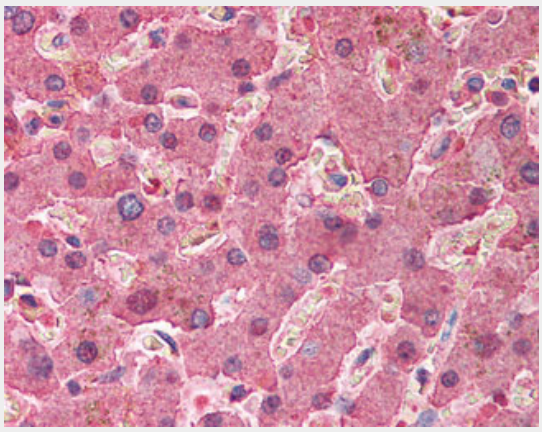

Volume
50 µl

SERPINA1 / Alpha 1 Antitrypsin Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

SERPINA1 / Alpha 1 Antitrypsin Antibody - Images

Anti-Alpha-1-Antitrypsin antibody IHC of human liver.

SERPINA1 / Alpha 1 Antitrypsin Antibody - Background

Inhibitor of serine proteases. Its primary target is elastase, but it also has a moderate affinity for plasmin and thrombin. Irreversibly inhibits trypsin, chymotrypsin and plasminogen activator. The aberrant form inhibits insulin-induced NO synthesis in platelets, decreases coagulation time and has proteolytic activity against insulin and plasmin.
