

VISA / MAVS Antibody (Internal)
Rabbit Polyclonal Antibody
Catalog # ALS11742**Specification**

VISA / MAVS Antibody (Internal) - Product Information

Application	IHC
Primary Accession	Q7Z434
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Calculated MW	57kDa KDa

VISA / MAVS Antibody (Internal) - Additional Information**Gene ID** 57506**Other Names**

Mitochondrial antiviral-signaling protein, MAVS, CARD adapter inducing interferon beta, Cardif, Interferon beta promoter stimulator protein 1, IPS-1, Putative NF-kappa-B-activating protein 031N, Virus-induced-signaling adapter, VISA, MAVS, IPS1, KIAA1271, VISA

Target/Specificity

17 amino acid peptide from near the center of human VISA.

Reconstitution & Storage

Short term 4°C, long term aliquot and store at -20°C, avoid freeze thaw cycles. Store undiluted.

Precautions

VISA / MAVS Antibody (Internal) is for research use only and not for use in diagnostic or therapeutic procedures.

VISA / MAVS Antibody (Internal) - Protein Information**Name** MAVS {ECO:0000303|PubMed:16125763, ECO:0000312|HGNC:HGNC:29233}**Function**

Adapter required for innate immune defense against viruses (PubMed:16125763, PubMed:16127453, PubMed:16153868, PubMed:16177806, PubMed:19631370, PubMed:20451243, PubMed:23087404, PubMed:20127681, PubMed:21170385, PubMed:27992402, PubMed:<a

[33139700](http://www.uniprot.org/citations/33139700), PubMed: [37582970](http://www.uniprot.org/citations/37582970)). Acts downstream of DHX33, RIGI and IFIH1/MDA5, which detect intracellular dsRNA produced during viral replication, to coordinate pathways leading to the activation of NF-kappa-B, IRF3 and IRF7, and to the subsequent induction of antiviral cytokines such as IFNB and RANTES (CCL5) (PubMed: [16125763](http://www.uniprot.org/citations/16125763), PubMed: [16127453](http://www.uniprot.org/citations/16127453), PubMed: [16153868](http://www.uniprot.org/citations/16153868), PubMed: [16177806](http://www.uniprot.org/citations/16177806), PubMed: [19631370](http://www.uniprot.org/citations/19631370), PubMed: [20451243](http://www.uniprot.org/citations/20451243), PubMed: [23087404](http://www.uniprot.org/citations/23087404), PubMed: [25636800](http://www.uniprot.org/citations/25636800), PubMed: [20127681](http://www.uniprot.org/citations/20127681), PubMed: [21170385](http://www.uniprot.org/citations/21170385), PubMed: [20628368](http://www.uniprot.org/citations/20628368), PubMed: [33110251](http://www.uniprot.org/citations/33110251), PubMed: [27736772](http://www.uniprot.org/citations/27736772)). Peroxisomal and mitochondrial MAVS act sequentially to create an antiviral cellular state (PubMed: [20451243](http://www.uniprot.org/citations/20451243)). Upon viral infection, peroxisomal MAVS induces the rapid interferon-independent expression of defense factors that provide short-term protection, whereas mitochondrial MAVS activates an interferon-dependent signaling pathway with delayed kinetics, which amplifies and stabilizes the antiviral response (PubMed: [20451243](http://www.uniprot.org/citations/20451243)). May activate the same pathways following detection of extracellular dsRNA by TLR3 (PubMed: [16153868](http://www.uniprot.org/citations/16153868)). May protect cells from apoptosis (PubMed: [16125763](http://www.uniprot.org/citations/16125763)). Involved in NLRP3 inflammasome activation by mediating NLRP3 recruitment to mitochondria (PubMed: [23582325](http://www.uniprot.org/citations/23582325)).

Cellular Location

Mitochondrion outer membrane; Single-pass membrane protein. Mitochondrion. Peroxisome

Tissue Location

Present in T-cells, monocytes, epithelial cells and hepatocytes (at protein level). Ubiquitously expressed, with highest levels in heart, skeletal muscle, liver, placenta and peripheral blood leukocytes.

VISA / MAVS Antibody (Internal) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)

VISA / MAVS Antibody (Internal) - Images

Anti-MAVS antibody IHC of human brain, cortex.

VISA / MAVS Antibody (Internal) - Background

Required for innate immune defense against viruses. Acts downstream of DDX58/RIG-I and IFIH1/MDA5, which detect intracellular dsRNA produced during viral replication, to coordinate pathways leading to the activation of NF-kappa-B, IRF3 and IRF7, and to the subsequent induction of antiviral cytokines such as IFN-beta and RANTES (CCL5). Peroxisomal and mitochondrial MAVS act sequentially to create an antiviral cellular state. Upon viral infection, peroxisomal MAVS induces the rapid interferon- independent expression of defense factors that provide short-term protection, whereas mitochondrial MAVS activates an interferon- dependent signaling pathway with delayed kinetics, which amplifies and stabilizes the antiviral response. May activate the same pathways following detection of extracellular dsRNA by TLR3. May protect cells from apoptosis.
