CASP7 / Caspase 7 Antibody (clone 10-1-62)

Mouse Monoclonal Antibody
Catalog # ALS12895

Specification

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Product Information

Application	**IHC**
Primary Accession	P55210
Reactivity	**Human, Mouse, Rat, Hamster, Monkey**
Host	**Mouse**
Clonality	**Monoclonal**
Calculated MW	**34kDa KDa**

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Additional Information

Gene ID 840

Other Names
Caspase-7, CASP-7, 3.4.22.60, Apoptotic protease Mch-3, CMH-1, ICE-like apoptotic protease 3, ICE-LAP3, Caspase-7 subunit p20, Caspase-7 subunit p11, CASP7, MCH3

Target/Specificity
Detects an ~37 kD protein, corresponding to the apparent molecular mass of the caspase-7 on SDS-PAGE immunoblots, in samples from human, mouse, rat, monkey and hamster origins. This antibody recognizes recombinant caspase-7 as well as full length pro ...

Reconstitution & Storage
Short term 4°C, long term aliquot and store at -20°C, avoid freeze thaw cycles. For maximum product recovery, after thawing, centrifuge the product vial before removing cap.

Precautions
CASP7 / Caspase 7 Antibody (clone 10-1-62) is for research use only and not for use in diagnostic or therapeutic procedures.

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Protein Information

Name CASP7 {ECO:0000303|PubMed:9070923, ECO:0000312|HGNC:HGNC:1508}

Function
Thiol protease involved in different programmed cell death processes, such as apoptosis, pyroptosis or granzyme-mediated programmed cell death, by proteolytically cleaving target proteins (PubMed:8521391, PubMed:8567622, PubMed:8576161, PubMed:9070923, PubMed:16916640, PubMed:17646170, PubMed:<a href="http://www.uniprot.org/citations/18723680"

target="_blank">18723680, PubMed:19581639, PubMed:11257230, PubMed:11257231, PubMed:11701129, PubMed:15314233). Has a marked preference for Asp-Glu-Val-Asp (DEVD) consensus sequences, with some plasticity for alternate non-canonical sequences (PubMed:12824163, PubMed:19581639, PubMed:20566630, PubMed:15314233, PubMed:17697120, PubMed:23897474, PubMed:23650375, PubMed:27032039). Its involvement in the different programmed cell death processes is probably determined by upstream proteases that activate CASP7 (By similarity). Acts as an effector caspase involved in the execution phase of apoptosis: following cleavage and activation by initiator caspases (CASP8, CASP9 and/or CASP10), mediates execution of apoptosis by catalyzing cleavage of proteins, such as CLSPN, PARP1, PTGES3 and YY1 (PubMed:10497198, PubMed:16123041, PubMed:16374543, PubMed:16916640, PubMed:18723680, PubMed:20566630, PubMed:21555521, PubMed:22184066, PubMed:22451931, PubMed:28863261, PubMed:31586028, PubMed:34156061, PubMed:27889207, PubMed:35338844, PubMed:35446120). Compared to CASP3, acts as a minor executioner caspase and cleaves a limited set of target proteins (PubMed:18723680). Acts as a key regulator of the inflammatory response in response to bacterial infection by catalyzing cleavage and activation of the sphingomyelin phosphodiesterase SMPD1 in the extracellular milieu, thereby promoting membrane repair (PubMed:21157428). Regulates pyroptosis in intestinal epithelial cells: cleaved and activated by CASP1 in response to S.typhimurium infection, promoting its secretion to the extracellular milieu, where it catalyzes activation of SMPD1, generating ceramides that repair membranes and counteract the action of gasdermin-D (GSDMD) pores (By similarity). Regulates granzyme-mediated programmed cell death in hepatocytes: cleaved and activated by granzyme B (GZMB) in response to bacterial infection, promoting its secretion to the extracellular milieu, where it catalyzes activation of SMPD1, generating ceramides that repair membranes and counteract the action of perforin (PRF1) pores (By similarity). Following cleavage by CASP1 in response to inflammasome activation, catalyzes processing and inactivation of PARP1, alleviating the transcription repressor activity of PARP1 (PubMed:22464733). Acts as an inhibitor of type I interferon production during virus-induced apoptosis by mediating cleavage of antiviral proteins CGAS, IRF3 and MAVS, thereby preventing cytokine overproduction (By similarity). Cleaves and activates sterol regulatory element binding proteins (SREBPs) (PubMed:8643593). Cleaves phospholipid scramblase proteins XKR4, XKR8 and XKR9 (By similarity). In case of infection, catalyzes cleavage of Kaposi sarcoma-associated herpesvirus protein ORF57, thereby preventing

expression of viral lytic genes (PubMed:20159985).

Cellular Location
Cytoplasm, cytosol. Nucleus. Secreted, extracellular space {ECO:0000250|UniProtKB:P97864}. Note=Following cleavage and activation by CASP1 or granzyme B (GZMB), secreted into the extracellular milieu by passing through the gasdermin-D (GSDMD) pores or perforin (PRF1) pore, respectively {ECO:0000250|UniProtKB:P97864}

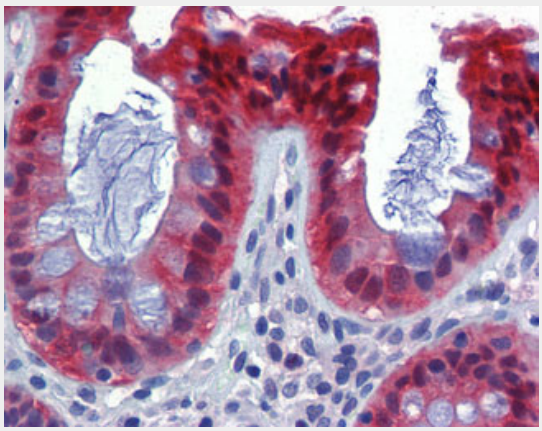

Tissue Location
Highly expressed in lung, skeletal muscle, liver, kidney, spleen and heart, and moderately in testis. No expression in the brain.

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Images

Anti-Caspase 7 antibody IHC of human colon.

CASP7 / Caspase 7 Antibody (clone 10-1-62) - Background

Involved in the activation cascade of caspases responsible for apoptosis execution. Cleaves and activates sterol regulatory element binding proteins (SREBPs). Proteolytically cleaves poly(ADP-ribose) polymerase (PARP) at a '216-Asp-|-Gly- 217' bond. Overexpression promotes programmed cell death.
