

# AR / Androgen Receptor Antibody (clone 2H8) Mouse Monoclonal Antibody

Catalog # ALS13184

## Specification

# AR / Androgen Receptor Antibody (clone 2H8) - Product Information

Application Primary Accession Reactivity Host Clonality Calculated MW IHC <u>P10275</u> Human Mouse Monoclonal 99kDa KDa

### AR / Androgen Receptor Antibody (clone 2H8) - Additional Information

Gene ID 367

**Other Names** Androgen receptor, Dihydrotestosterone receptor, Nuclear receptor subfamily 3 group C member 4, AR, DHTR, NR3C4

Target/Specificity Human AR

**Reconstitution & Storage** Long term: -20°C; Short term: +4°C. Avoid repeat freeze-thaw cycles.

**Precautions** AR / Androgen Receptor Antibody (clone 2H8) is for research use only and not for use in diagnostic or therapeutic procedures.

## AR / Androgen Receptor Antibody (clone 2H8) - Protein Information

Name AR

Synonyms DHTR, NR3C4

Function

Steroid hormone receptors are ligand-activated transcription factors that regulate eukaryotic gene expression and affect cellular proliferation and differentiation in target tissues (PubMed:<a href="http://www.uniprot.org/citations/19022849" target="\_blank">19022849</a>). Transcription factor activity is modulated by bound coactivator and corepressor proteins like ZBTB7A that recruits NCOR1 and NCOR2 to the androgen response elements/ARE on target genes, negatively regulating androgen receptor signaling and androgen-induced cell proliferation (PubMed:<a href="http://www.uniprot.org/citations/20812024" target="\_blank">20812024</a>). Transcription activation is also down-regulated by NROB2. Activated, but not phosphorylated, by HIPK3 and ZIPK/DAPK3.

#### **Cellular Location**

Nucleus. Cytoplasm Note=Detected at the promoter of target genes (PubMed:25091737) Predominantly cytoplasmic in unligated form but translocates to the nucleus upon ligand-binding. Can also translocate to the nucleus in unligated form in the presence of RACK1.

Tissue Location

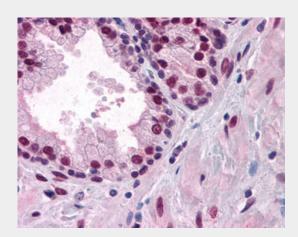

[Isoform 2]: Mainly expressed in heart and skeletal muscle.

### AR / Androgen Receptor Antibody (clone 2H8) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

### AR / Androgen Receptor Antibody (clone 2H8) - Images

Anti-Androgen Receptor antibody IHC of human prostate.

#### AR / Androgen Receptor Antibody (clone 2H8) - Background

Steroid hormone receptors are ligand-activated transcription factors that regulate eukaryotic gene expression and affect cellular proliferation and differentiation in target tissues. Transcription factor activity is modulated by bound coactivator and corepressor proteins. Transcription activation is down-regulated by NR0B2. Activated, but not phosphorylated, by HIPK3 and ZIPK/DAPK3.
