### Anti-PSMD10 / Gankyrin Antibody (clone 4B5) - Protein Information

#### Name PSMD10

#### Function

Acts as a chaperone during the assembly of the 26S proteasome, specifically of the PA700/19S regulatory complex (RC). In the initial step of the base subcomplex assembly is part of an intermediate PSMD10:PSMC4:PSMC5:PAAF1 module which probably assembles with a PSMD5:PSMC2:PSMC1:PSMD2 module. Independently of the proteasome, regulates EGF-induced AKT activation through inhibition of the RHOA/ROCK/PTEN pathway, leading to prolonged AKT activation. Plays an important role in RAS-induced tumorigenesis.

Cellular Location Cytoplasm. Nucleus

#### **Tissue Location**

Tends to be up-regulated in cancer cells with RAS mutations, including lung cancers and adenocarconimas (at protein level).
