

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody

Affinity purified rabbit polyclonal antibody Catalog # AN1066

Specification

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody - Product Information

Application IHC
Primary Accession P25122
Reactivity Mouse, Rat
Host Rabbit
Clonality polyclonal
Calculated MW 100 KDa

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody - Additional Information

Gene ID 25327
Gene Name KCNC1

Other Names

Potassium voltage-gated channel subfamily C member 1, NGK2, RAW2, Voltage-gated potassium channel subunit Kv31, Voltage-gated potassium channel subunit Kv4, Kcnc1

Target/Specificity

Synthetic phospho-peptide corresponding to amino acid residues surrounding Ser503 conjugated to KLH.

Dilution

IHC~~ 1:1000

Format

Prepared from rabbit serum by affinity purification via sequential chromatography on phosphoand dephosphopeptide affinity columns.

Antibody Specificity

Specific for the ~100k Kv3.1 voltage-gated potassium channel proteinphosphorylated at Ser503.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

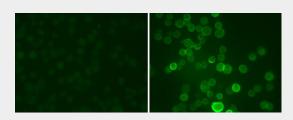

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody - Images

IHC staining of medial nucleus of the trapezoid body (MNTB) cells with the phospho-Ser503 Kv3.1 subunit antibody. The left panel shows control cells. The right panel shows cells that have been exposed to the protein kinase C activator PMA.

Phospho-Ser503 Kv3.1, Voltage-Gated, Potassium Channel Antibody - Background

Voltage-gated K+ channels are important determinants of neuronal membrane excitability. Moreover, differences in K+ channel expression patterns and densities contribute to the variations in action potential waveforms and repetitive firing patterns evident in different neuronal cell types (Maletic-Savatic et al., 1995; Pongs, 1999; Blaine and Ribera, 1998; Burger and Ribera, 1996). The Kv3.1 potassium channel is expressed at high levels in neurons that characteristically fire rapid trains of action potentials (Gan et al., 1999).
