

Alpha-Internexin (NF66) Antibody
Chicken polyclonal antibody
Catalog # AN1138**Specification**

Alpha-Internexin (NF66) Antibody - Product Information

Application	WB, IF
Primary Accession	P23565
Reactivity	Human, Mouse, Rat
Host	chicken
Clonality	polyclonal
Calculated MW	66 KDa

Alpha-Internexin (NF66) Antibody - Additional Information

Gene ID	24503
Gene Name	INA

Other Names

Alpha-internexin, Alpha-Inx, Ina, Inexa

Target/Specificity

Recombinant rat alpha-internexin expressed in and purified from E. coli.

Dilution

WB~~ 1:5000

IF~~ 1:500

Format

Total IgY fraction

Antibody Specificity

Specific for the ~66k alpha Internexin protein. Minor bands at ~150k are probably covalent dimers and bands at ~50k represent alpha-internexin breakdown products.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Alpha-Internexin (NF66) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

Alpha-Internexin (NF66) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Alpha-Internexin (NF66) Antibody - Images

Western blot of rat cortex lysate showing specific immunolabeling of the ~ 66k alpha internexin protein.

Immunostaining of cultured neurons and glia showing specific labeling of neuronal processes (red) using our alpha-internexin antibody and microglia (green) with a coronin 1a antibody.

Alpha-Internexin (NF66) Antibody - Background

Alpha-internexin is a Class IV intermediate filament originally discovered as it co-purifies with other neurofilament subunits (1). Alpha-internexin is related to but distinct from the better known neurofilament triplet proteins, NF-L, NF-M and NF-H, having similar protein sequence motifs and a similar intron organization. It is expressed only in neurons and in large amounts early in neuronal development, but is down-regulated in many neurons as development proceeds. Many classes of mature neurons contain alpha-internexin in addition to NF-L, NF-M and NF-H. In some mature neurons alpha-internexin is the only neurofilament subunit expressed. Antibodies to

alpha-internexin are therefore unique probes to study and classify neuronal types and follow their processes in sections and in tissue culture. In addition, recent studies show a marked up-regulation of alpha-internexin during neuronal regeneration (2). The use of antibodies to this protein in the study of brain tumors has not been examined to date, but is likely to be of interest. Recently Cairns et al. used this antibody to show that alpha-internexin is an abundant component of the inclusions of neurofilament inclusion body disease (NFID), a serious human neurodegenerative disorder (3,4). The antibody was also used to confirm the presence of circulating auto-antibodies to alpha-internexin in the sera of some patients with endocrine autoimmunity, as well as in some normal individuals (5).
