

Periostin, C-terminal Antibody
Rabbit polyclonal antibody
Catalog # AN1182**Specification**

Periostin, C-terminal Antibody - Product Information

Application	WB
Primary Accession	Q62009
Reactivity	Chicken, Human, Mouse
Host	Rabbit
Clonality	polyclonal
Calculated MW	93 KDa

Periostin, C-terminal Antibody - Additional Information

Gene ID	50706
Gene Name	POSTN
Other Names	
Periostin, PN, Osteoblast-specific factor 2, OSF-2, Postn, Osf2	

Target/Specificity

Bacterial fusion protein equivalent to a 188-amino acid polypeptide from the C-terminal region of mouse periostin which is comprised of six small alternatively-spliced exons.

Dilution

WB~~ 1:1000

Format

Affinity purified

Antibody Specificity

Specific for the ~93 kDa periostin doublet in mouse lung extract. Consistent with the fact that this antibody is made against an alternatively spliced region of periostin, this antibody recognizes only the largest two of the three forms of periostin recognized on Western blots by the Pan periostin antibody (Cat. # 1622-PERI) and also shows a distinctive staining pattern by immunohistochemistry (data not shown). The antibody works well for immunohistochemistry on paraformaldehyde-fixed sections with a simple antigen-retrieval protocol (incubate slides for 20 minutes at 90° C in 10 mM sodium citrate (pH 6.0)/ 0.1 % Tween-20).

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Periostin, C-terminal Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

Periostin, C-terminal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Periostin, C-terminal Antibody - Images

Western blot of rat lung lysate showing specific immunolabeling of the ~ 93 kDa periostin protein doublet.

Periostin, C-terminal Antibody - Background

Periostin is a matricellular protein, i.e. an extracellular matrix protein that interacts both with other ECM proteins and with cell-surface receptors. Like many other matricellular proteins, the function of periostin is important both in embryonic development and in the remodeling of adult tissues in response to pathological insults. Periostin was originally isolated as an osteoblast-specific marker that functions as a cell adhesion molecule for preosteoblasts and is thought to be involved in osteoblast recruitment, attachment and spreading (Kruzynska-Frejtag A. et al., 2004). Periostin has since been demonstrated to be important in heart valve development and myocardial infarction because it promotes collagen fibrogenesis, inhibits differentiation of progenitor cells into cardiomyocytes and is essential in maintaining the biomechanical properties of the adult myocardium (Norris et al., 2008).
