Phospho-Ser269 Aquaporin 2 Antibody

Affinity purified rabbit polyclonal antibody
Catalog # AN1193

Specification

Phospho-Ser269 Aquaporin 2 Antibody - Product Information

Application	**WB**
Primary Accession	P34080
Reactivity	**Rat**
Predicted	**Bovine, Mouse**
Host	**Rabbit**
Clonality	**polyclonal**
Calculated MW	**29/37 KDa**

Phospho-Ser269 Aquaporin 2 Antibody - Additional Information

Gene ID	**25386**
Gene Name	**AQP2**

Other Names
Aquaporin-2, AQP-2, ADH water channel, Aquaporin-CD, AQP-CD, Collecting duct water channel protein, WCH-CD, Water channel protein for renal collecting duct, Aqp2

Target/Specificity
Synthetic phospho-peptide corresponding to amino acid residues surrounding Ser269 conjugated to KLH.

Dilution
WB~~ 1:1000

Format
Prepared from rabbit serum by affinity purification via sequential chromatography on phospho- and dephosphopeptide affinity columns.

Antibody Specificity
Specific for the ~29k AQP2 protein phosphorylated at Ser269. Also recognizes the glycosylated form of AQP2 at ~ 37k. Immunolabeling of the AQP2 band is blocked by preadsorption with the phospho-peptide used as antigen but not by the corresponding dephospho-peptide.

Storage
Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions
Phospho-Ser269 Aquaporin 2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping
Blue Ice

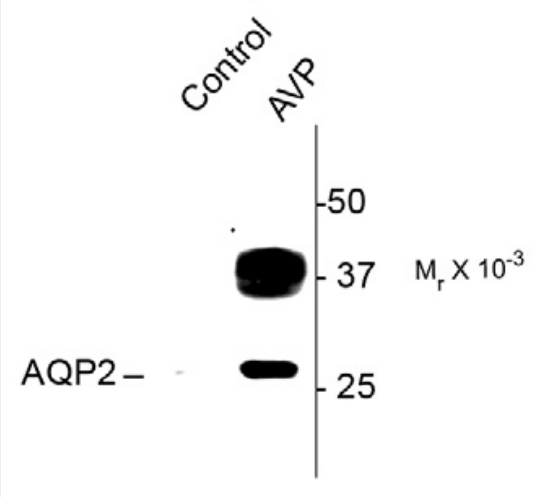
Phospho-Ser269 Aquaporin 2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Phospho-Ser269 Aquaporin 2 Antibody - Images



Western blot of vasopressin (AVP) treated rat kidney lysate showingspecific immunolabeling of the ~ 29k and 37k glycosylated form of theAQP2 protein phosphorylated at Ser269.

Phospho-Ser269 Aquaporin 2 Antibody - Background

Aquaporin 2 (AQP2) is a hormonally regulated water channel located in the renal collecting duct. Mutations in the AQP2 gene cause hereditary nephrogenic diabetes insipidus in humans (Iolascon et al., 2007). A vasopressin induced cAMP increase results in the phosphorylation of AQP2 at serine-256 and its translocation from the intracellular vesicles to the apical membrane of principal cells (van Balkom et al., 2002). Serine-269 has been recently identified as a vasopressin-mediated phosphorylation site on AQP2 and as such has shown to potentiate plasma membrane retention of AQP2 (Hoffert JD et al., 2008).
