

MEF2C Antibody
Purified Mouse Monoclonal Antibody
Catalog # AO1786a**Specification****MEF2C Antibody - Product Information**

| | |
|-------------------|------------------------|
| Application | E, WB, FC, IHC |
| Primary Accession | Q06413 |
| Reactivity | Human, Mouse |
| Host | Mouse |
| Clonality | Monoclonal |
| Isotype | IgG1 |
| Calculated MW | 51.2kDa KDa |

Description

This locus encodes a member of the MADS box transcription enhancer factor 2 (MEF2) family of proteins, which play a role in myogenesis. The encoded protein, MEF2 polypeptide C, has both trans-activating and DNA binding activities. This protein may play a role in maintaining the differentiated state of muscle cells. Mutations and deletions at this locus have been associated with severe mental retardation, stereotypic movements, epilepsy, and cerebral malformation. Alternatively spliced transcript variants have been described.

Immunogen

Purified recombinant fragment of human MEF2C (AA: 1-125) expressed in E. Coli.

Formulation

Purified antibody in PBS with 0.05% sodium azide

MEF2C Antibody - Additional Information

Gene ID 4208

Other Names

Myocyte-specific enhancer factor 2C, MEF2C

Dilution

E~~1/10000
WB~~1/500 - 1/2000
FC~~1/200 - 1/400
IHC~~1/200 - 1/1000

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

MEF2C Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

MEF2C Antibody - Protein Information

Name MEF2C ([HGNC:6996](#))

Function

Transcription activator which binds specifically to the MEF2 element present in the regulatory regions of many muscle-specific genes. Controls cardiac morphogenesis and myogenesis, and is also involved in vascular development. Enhances transcriptional activation mediated by SOX18. Plays an essential role in hippocampal-dependent learning and memory by suppressing the number of excitatory synapses and thus regulating basal and evoked synaptic transmission. Crucial for normal neuronal development, distribution, and electrical activity in the neocortex. Necessary for proper development of megakaryocytes and platelets and for bone marrow B-lymphopoiesis. Required for B-cell survival and proliferation in response to BCR stimulation, efficient IgG1 antibody responses to T-cell-dependent antigens and for normal induction of germinal center B-cells. May also be involved in neurogenesis and in the development of cortical architecture (By similarity). Isoforms that lack the repressor domain are more active than isoform 1.

Cellular Location

Nucleus {ECO:0000250|UniProtKB:A0A096MJY4}. Cytoplasm, sarcoplasm {ECO:0000250|UniProtKB:A0A096MJY4}

Tissue Location

Expressed in brain and skeletal muscle.

MEF2C Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
