

RHOF Antibody

Purified Mouse Monoclonal Antibody Catalog # AO1955a

Specification

RHOF Antibody - Product Information

Application E, WB, FC
Primary Accession
Reactivity Human
Host Mouse
Clonality Monoclonal
Isotype IgG2a

Calculated MW 23.6kDa KDa

Description

RHOF is a protein-coding gene. Diseases associated with RHOF include mycosis fungoides, and lung cancer, and among its related super-pathways are Signaling by Rho GTPases and Signaling by GPCR. GO annotations related to this gene include GTP binding and GTPase activity. An important paralog of this gene is RHOB.

Immunogen

Purified recombinant fragment of human RHOF (AA: 1-84) expressed in E. Coli.

Formulation

Purified antibody in PBS with 0.05% sodium azide.

RHOF Antibody - Additional Information

Gene ID 54509

Other Names

Rho-related GTP-binding protein RhoF, Rho family GTPase Rif, Rho in filopodia, RHOF, ARHF, RIF

Dilution

E~~1/10000 WB~~1/500 - 1/2000 FC~~1/200 - 1/400

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

RHOF Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

RHOF Antibody - Protein Information

Name RHOF

Synonyms ARHF, RIF

Function

Plasma membrane-associated small GTPase which cycles between an active GTP-bound and an inactive GDP-bound state. Causes the formation of thin, actin-rich surface projections called filopodia. Functions cooperatively with CDC42 and Rac to generate additional structures, increasing the diversity of actin-based morphology.

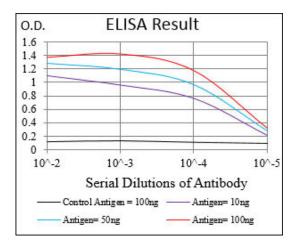

Cellular Location

Cell membrane; Lipid-anchor; Cytoplasmic side. Cytoplasm, cytoskeleton

RHOF Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

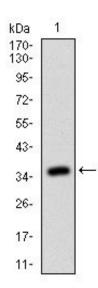

Figure 1: Western blot analysis using RHOF mAb against human RHOF (AA: 1-84) recombinant protein. (Expected MW is 34.9 kDa)

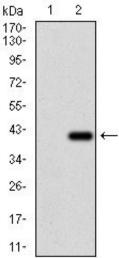

Figure 2: Western blot analysis using RHOF mAb against HEK293 (1) and RHOF (AA: 1-84)-hlgGFc transfected HEK293 (2) cell lysate.

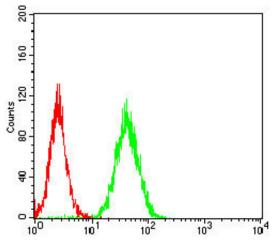

Figure 3: Flow cytometric analysis of Hela cells using RHOF mouse mAb (green) and negative control (red).

RHOF Antibody - Background

Soluble guanylate cyclases are heterodimeric proteins that catalyze the conversion of GTP to 3',5'-cyclic GMP and pyrophosphate. The protein encoded by this gene is an alpha subunit of this complex and it interacts with a beta subunit to form the guanylate cyclase enzyme, which is activated by nitric oxide. Several transcript variants encoding a few different isoforms have been found for this gene.;;
