**Description**

The low density lipoprotein receptor (LDLR) gene family consists of cell surface proteins involved in receptor-mediated endocytosis of specific ligands. Low density lipoprotein (LDL) is normally bound at the cell membrane and taken into the cell ending up in lysosomes where the protein is degraded and the cholesterol is made available for repression of microsomal enzyme 3-hydroxy-3-methylglutaryl coenzyme A (HMG CoA) reductase, the rate-limiting step in cholesterol synthesis. At the same time, a reciprocal stimulation of cholesterol ester synthesis takes place. Mutations in this gene cause the autosomal dominant disorder, familial hypercholesterolemia. Alternate splicing results in multiple transcript variants.

**Immunogen**

Purified recombinant fragment of human LDLR (AA: 22-150) expressed in E. Coli.

**Formulation**

Purified antibody in PBS with 0.05% sodium azide

**LDLR Antibody - Additional Information**

**Gene ID** 3949

**Other Names**

Low-density lipoprotein receptor, LDL receptor, LDLR

**Dilution**

E~~1/10000  
WB~~1/500 - 1/2000  
FC~~1/200 - 1/400

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

LDLR Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## **LDLR Antibody - Protein Information**

**Name** LDLR

### **Function**

Binds low density lipoprotein /LDL, the major cholesterol- carrying lipoprotein of plasma, and transports it into cells by endocytosis. In order to be internalized, the receptor-ligand complexes must first cluster into clathrin-coated pits. Forms a ternary complex with PGRMC1 and TMEM97 receptors which increases LDLR-mediated LDL internalization (PubMed:<a href="http://www.uniprot.org/citations/30443021" target="\_blank">30443021</a>).

### **Cellular Location**

Cell membrane; Single-pass type I membrane protein {ECO:0000250|UniProtKB:P01131}. Membrane, clathrin-coated pit. Golgi apparatus. Early endosome. Late endosome. Lysosome Note=Rapidly endocytosed upon ligand binding. Localized at cell membrane, probably in lipid rafts, in serum-starved conditions (PubMed:30443021).

## **LDLR Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.
