KLK9 Antibody (Center) - Images

KLK9 Antibody (Center) (Cat. #AP14680c) western blot analysis in HL-60 cell line lysates (35ug/lane). This demonstrates the KLK9 antibody detected the KLK9 protein (arrow).

KLK9 Antibody (Center) (AP14680c) immunohistochemistry analysis in formalin fixed and paraffin embedded human skin tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of KLK9 Antibody (Center) for immunohistochemistry. Clinical relevance has not been evaluated.

KLK9 Antibody (Center) - Background

The protein encoded by this gene is a kallikrein-related serine protease. This gene is activated by steroid hormones in a human breast cancer cell line, making it a good marker for cancer detection. The encoded protein is found primarily in the cytoplasm.
