**TGF Beta 2 Antibody (C-term) - Images**

TGFB2 Antibody (C-term) (Cat.# AP1476b) western blot analysis in Raji cell line lysates (35ug/lane). This demonstrates the TGFB2 antibody detected the TGFB2 protein (arrow).

Formalin-fixed and paraffin-embedded human breast carcinoma tissue reacted with TGFβ2 antibody (C-term)(Cat.#AP1476b), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.

#### **TGF Beta 2 Antibody (C-term) - Background**

Transforming growth factor-beta 2 (TGF-β2) is a cytokine that performs many cellular functions and has a vital role during embryonic development. It is an extracellular glycosylated protein. It is known to suppress the effects of interleukin dependent T-cell tumors. There are two named isoforms of this protein, created by alternative splicing of the same gene.
