

TRPM4 Antibody (C-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP16061b**Specification**

TRPM4 Antibody (C-term) - Product Information

Application	WB,E
Primary Accession	Q8TD43
Other Accession	NP_001182156.1 , NP_060106.2
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	134301
Antigen Region	1121-1149

TRPM4 Antibody (C-term) - Additional Information**Gene ID** 54795**Other Names**

Transient receptor potential cation channel subfamily M member 4, hTRPM4, Calcium-activated non-selective cation channel 1, Long transient receptor potential channel 4, LTrpC-4, LTrpC4, Melastatin-4, TRPM4, LTRPC4

Target/Specificity

This TRPM4 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 1121-1149 amino acids from the C-terminal region of human TRPM4.

Dilution

WB~~1:1000

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

TRPM4 Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

TRPM4 Antibody (C-term) - Protein Information**Name** TRPM4 ([HGNC:17993](#))

Synonyms LTRPC4

Function Calcium-activated non selective (CAN) cation channel that mediates membrane depolarization (PubMed:[12015988](#), PubMed:[29211723](#), PubMed:[30528822](#)). While it is activated by increase in intracellular $\text{Ca}(2+)$, it is impermeable to it (PubMed:[12015988](#)). Mediates transport of monovalent cations ($\text{Na}(+) > \text{K}(+) > \text{Cs}(+) > \text{Li}(+)$), leading to depolarize the membrane. It thereby plays a central role in cardiomyocytes, neurons from entorhinal cortex, dorsal root and vomeronasal neurons, endocrine pancreas cells, kidney epithelial cells, cochlea hair cells etc. Participates in T-cell activation by modulating $\text{Ca}(2+)$ oscillations after T lymphocyte activation, which is required for NFAT-dependent IL2 production. Involved in myogenic constriction of cerebral arteries. Controls insulin secretion in pancreatic beta-cells. May also be involved in pacemaking or could cause irregular electrical activity under conditions of $\text{Ca}(2+)$ overload. Affects T-helper 1 (Th1) and T-helper 2 (Th2) cell motility and cytokine production through differential regulation of calcium signaling and NFATC1 localization. Enhances cell proliferation through up-regulation of the beta-catenin signaling pathway. Plays a role in keratinocyte differentiation (PubMed:[30528822](#)).

Cellular Location

[Isoform 1]: Cell membrane; Multi-pass membrane protein. Endoplasmic reticulum. Golgi apparatus

Tissue Location

Widely expressed with a high expression in intestine and prostate. In brain, it is both expressed in whole cerebral arteries and isolated vascular smooth muscle cells Prominently expressed in Purkinje fibers. Expressed at higher levels in T-helper 2 (Th2) cells as compared to T-helper 1 (Th1) cells. Expressed in keratocytes (PubMed:[30528822](#)).

TRPM4 Antibody (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

TRPM4 Antibody (C-term) - Images

TRPM4 Antibody (C-term) (Cat. #AP16061b) western blot analysis in 293 cell line lysates (35ug/lane). This demonstrates the TRPM4 antibody detected the TRPM4 protein (arrow).

TRPM4 Antibody (C-term) - Background

The protein encoded by this gene is a calcium-activated nonselective ion channel that mediates transport of monovalent cations across membranes, thereby depolarizing the membrane. The activity of the encoded protein increases with increasing intracellular calcium concentration, but this channel does not transport calcium. Two transcript variants encoding different isoforms have been found for this gene.
