

MRPS2 Antibody (N-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP17471a**Specification**

MRPS2 Antibody (N-term) - Product Information

Application	WB,E
Primary Accession	O9Y399
Other Accession	NP_057118.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	33249
Antigen Region	44-71

MRPS2 Antibody (N-term) - Additional Information**Gene ID** 51116**Other Names**

28S ribosomal protein S2, mitochondrial, MRP-S2, S2mt, MRPS2

Target/Specificity

This MRPS2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 44-71 amino acids from the N-terminal region of human MRPS2.

Dilution

WB~~1:1000

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

MRPS2 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

MRPS2 Antibody (N-term) - Protein Information**Name** MRPS2**Function** Required for mitoribosome formation and stability, and mitochondrial translation.

Cellular Location
Mitochondrion.**MRPS2 Antibody (N-term) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

MRPS2 Antibody (N-term) - Images

MRPS2 Antibody (N-term) (Cat. #AP17471a) western blot analysis in HepG2 cell line lysates (35ug/lane). This demonstrates the MRPS2 antibody detected the MRPS2 protein (arrow).

MRPS2 Antibody (N-term) - Background

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein that belongs to the ribosomal protein S2 family.
