PCDHGA5 Antibody (N-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP18382a

Specification

PCDHGA5 Antibody (N-term) - Product Information

Application	**WB,E**
Primary Accession	Q9Y5G8
Other Accession	NP_061741.1
Reactivity	**Human**
Host	**Rabbit**
Clonality	**Polyclonal**
Isotype	**Rabbit IgG**
Calculated MW	**100935**
Antigen Region	**254-280**

PCDHGA5 Antibody (N-term) - Additional Information

Gene ID 56110

Other Names
Protocadherin gamma-A5, PCDH-gamma-A5, PCDHGA5

Target/Specificity
This PCDHGA5 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 254-280 amino acids from the N-terminal region of human PCDHGA5.

Dilution
WB~~1:1000

Format
Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage
Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions
PCDHGA5 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

PCDHGA5 Antibody (N-term) - Protein Information

Name PCDHGA5

Function Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

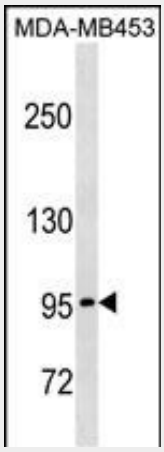

Cellular Location
Cell membrane; Single-pass type I membrane protein

PCDHGA5 Antibody (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

PCDHGA5 Antibody (N-term) - Images

PCDHGA5 Antibody (N-term) (Cat. #AP18382a) western blot analysis in MDA-MB453 cell line lysates (35ug/lane).This demonstrates the PCDHGA5 Antibody detected the PCDHGA5 protein (arrow).

PCDHGA5 Antibody (N-term) - Background

This gene is a member of the protocadherin gamma gene cluster, one of three related clusters tandemly linked on chromosome five. These gene clusters have an immunoglobulin-like organization, suggesting that a novel mechanism may be involved in their regulation and expression. The gamma gene cluster includes 22 genes divided into 3 subfamilies. Subfamily A contains 12 genes, subfamily B contains 7 genes and 2 pseudogenes, and the more distantly related subfamily C contains 3 genes. The tandem array of 22 large, variable region exons are followed by a constant region, containing 3 exons shared by all genes in the cluster. Each variable region exon encodes the extracellular region, which includes 6 cadherin ectodomains and a transmembrane region. The constant region exons encode the common cytoplasmic region. These neural cadherin-like cell adhesion proteins most likely play a critical role in the establishment and function of specific cell-cell connections in the brain. Alternative splicing has been

described for the gamma cluster genes.
