

COPG Antibody (C-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP19908b

Specification

COPG Antibody (C-term) - Product Information

Application	WB,E
Primary Accession	O9Y678
Other Accession	NP_057212.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	97718
Antigen Region	721-750

COPG Antibody (C-term) - Additional Information

Gene ID 22820

Other Names

Coatomer subunit gamma-1, Gamma-1-coat protein, Gamma-1-COP, COPG1, COPG

Target/Specificity

This COPG antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 721-750 amino acids from the C-terminal region of human COPG.

Dilution

WB~~1:1000

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

COPG Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

COPG Antibody (C-term) - Protein Information

Name COPG1

Synonyms COPG

Function The coatomer is a cytosolic protein complex that binds to dilysine motifs and reversibly associates with Golgi non-clathrin- coated vesicles, which further mediate biosynthetic protein transport from the ER, via the Golgi up to the trans Golgi network. Coatomer complex is required for budding from Golgi membranes, and is essential for the retrograde Golgi-to-ER transport of dilysine-tagged proteins. In mammals, the coatomer can only be recruited by membranes associated to ADP-ribosylation factors (ARFs), which are small GTP-binding proteins; the complex also influences the Golgi structural integrity, as well as the processing, activity, and endocytic recycling of LDL receptors. Required for limiting lipid storage in lipid droplets. Involved in lipid homeostasis by regulating the presence of perilipin family members PLIN2 and PLIN3 at the lipid droplet surface and promoting the association of adipocyte triglyceride lipase (PNPLA2) with the lipid droplet surface to mediate lipolysis (By similarity).

Cellular Location

Cytoplasm. Golgi apparatus membrane; Peripheral membrane protein; Cytoplasmic side. Cytoplasmic vesicle, COPI-coated vesicle membrane; Peripheral membrane protein; Cytoplasmic side. Note=The coatomer is cytoplasmic or polymerized on the cytoplasmic side of the Golgi, as well as on the vesicles/buds originating from it. Predominantly located in the cis- Golgi apparatus.

COPG Antibody (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.
