

## **H2AFJ Antibody (N-term)**

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP5572a

### **Specification**

## **H2AFJ Antibody (N-term) - Product Information**

Application WB,E
Primary Accession Q9BTM1

Other Accession A9UMV8, Q8R1M2, Q4R3X5, P70082, Q3ZBX9,

NP\_808760.1

Reactivity Human

Predicted Bovine, Chicken, Monkey, Mouse, Rat

Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Calculated MW 14019
Antigen Region 1-30

## **H2AFJ Antibody (N-term) - Additional Information**

**Gene ID 55766** 

## **Other Names**

Histone H2AJ, H2a/j, H2AFJ

### Target/Specificity

This H2AFJ antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 1-30 amino acids from the N-terminal region of human H2AFJ.

### **Dilution**

WB~~1:1000

### **Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

#### Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

### **Precautions**

H2AFJ Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

# **H2AFJ Antibody (N-term) - Protein Information**

Name H2AJ (<u>HGNC:14456</u>)

**Function** Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.

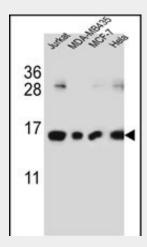

**Cellular Location**Nucleus. Chromosome.

## **H2AFJ Antibody (N-term) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

### **H2AFJ Antibody (N-term) - Images**

H2AFJ Antibody (N-term) (Cat. #AP5572a) western blot analysis in Jurkat,MDA-MB435,MCF-7,Hela cell line lysates (35ug/lane). This demonstrates the H2AFJ antibody detected the H2AFJ protein (arrow).

### H2AFJ Antibody (N-term) - Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures.
