

ADAMTS13 Antibody (Center)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP7438c**Specification**

ADAMTS13 Antibody (Center) - Product Information

Application	WB,E
Primary Accession	Q76LX8
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Antigen Region	829-858

ADAMTS13 Antibody (Center) - Additional Information**Gene ID** 11093**Other Names**

A disintegrin and metalloproteinase with thrombospondin motifs 13, ADAM-TS 13, ADAM-TS13, ADAMTS-13, von Willebrand factor-cleaving protease, vWF-CP, vWF-cleaving protease, ADAMTS13, C9orf8

Target/Specificity

This ADAMTS13 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 829-858 amino acids from the Central region of human ADAMTS13.

Dilution

WB~~1:500

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

ADAMTS13 Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

ADAMTS13 Antibody (Center) - Protein Information**Name** ADAMTS13**Synonyms** C9orf8

Function Cleaves the vWF multimers in plasma into smaller forms thereby controlling vWF-mediated platelet thrombus formation.

Cellular Location

Secreted. Note=Secretion enhanced by O-fucosylation of TSP type-1 repeats

Tissue Location

Plasma. Expressed primarily in liver.

ADAMTS13 Antibody (Center) - Protocols

Provided below are standard protocols that you may find useful for product applications.

ADAMTS13 Antibody (Center) - Background

ADAMTS13 is a member of the ADAMTS (a disintegrin and metalloproteinase with thrombospondin motif) protein family. Members of the family share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-terminal domains. The enzyme is the von Willebrand Factor (vWF)-cleaving protease, which is responsible for cleaving at the site of Tyr842-Met843 of the vWF

molecule. A deficiency of this enzyme is associated with thrombotic thrombocytopenic purpura.
