

NIK Antibody
Catalog # ASC10016**Specification****NIK Antibody - Product Information**

Application	ICC, IF
Primary Accession	Q99558
Other Accession	Q99558 , 9020
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	Predicted: 104 kDa KDa
Application Notes	NIK antibody can be used for detection of NIK by Western blot at 1 - 2 µg/mL.

NIK Antibody - Additional InformationGene ID **9020****Other Names**

NIK Antibody: HS, NIK, HSNIK, FTDCR1B, Mitogen-activated protein kinase kinase kinase 14, NF-kappa-beta-inducing kinase, HsNIK, mitogen-activated protein kinase kinase kinase 14

Target/Specificity

NIK antibody was raised against a 17 amino acid peptide near the carboxy terminus of human NIK. The immunogen is located within the last 50 amino acids of NIK.

Reconstitution & Storage

NIK antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

NIK Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

NIK Antibody - Protein Information**Name** MAP3K14 ([HGNC:6853](#))**Function**

Lymphotoxin beta-activated kinase which seems to be exclusively involved in the activation of NF-kappa-B and its transcriptional activity. Phosphorylates CHUK/IKKA, thereby promoting proteolytic processing of NFKB2/P100, which leads to NF-kappa-B activation via the non-canonical pathway (PubMed: <http://www.uniprot.org/citations/25406581> target="_blank">25406581, PubMed: <http://www.uniprot.org/citations/29230214> target="_blank">29230214). Has an essential role in the non-canonical NF-kappa-B signaling that regulates genes encoding molecules involved in B-cell survival, lymphoid organogenesis, and immune response (PubMed: <http://www.uniprot.org/citations/25406581>)

target="_blank">25406581). Could act in a receptor-selective manner.

Cellular Location

Cytoplasm.

Tissue Location

Weakly expressed in testis, small intestine, spleen, thymus, peripheral blood leukocytes, prostate, ovary and colon

NIK Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

NIK Antibody - Images

Immunocytochemistry of IL-1RAcP in HeLa cells with IL-1RAcP antibody at 2 µg/ml.

Immunofluorescence of OLIG2 in mouse brain tissue with OLIG2 Antibody at 20 µg/mL.

NIK Antibody - Background

NIK Antibody: Nuclear factor kappa B (NF- κ B) is a ubiquitous transcription factor and an essential mediator of gene expression during activation of immune and inflammatory responses. NF- κ B mediates the expression of a great variety of genes in response to extracellular stimuli including IL-1, TNF α , LPS and mitogens. A serine/threonine protein kinase which mediates NF- κ B activation by IL-1, TNF α and CD95 was identified recently and designated NIK (for NF- κ B inducing kinase). NIK is an activator of I κ B kinase alpha and beta (IKK α and IKK β). Therefore, NIK is a key molecule in the NF- κ B signaling pathway leading to the induction of a variety of gene expression in response to proinflammatory cytokines and bacteria products.
