MYD88 Antibody
Catalog # ASC10065

Specification

MYD88 Antibody - Product Information

Application	**WB**
Primary Accession	U70451
Other Accession	U70451, 1763090
Reactivity	**Human, Mouse, Rat**
Host	**Rabbit**
Clonality	**Polyclonal**
Isotype	**IgG**
Calculated MW	**Aprox: 35 kDa KDa**
Application Notes	**MYD88 antibody can be used for detection of MyD88 by Western blot 0.5 µg/mL. For immunohistochemistry use a concentration of 4 µg/mL. For immunofluorescence and immunocytochemistry use a concentration of 5 µg/mL.**

MYD88 Antibody - Additional Information

Gene ID **4615**

Other Names
MYD88 Antibody: MYD88D, myeloid differentiation primary response gene (88)

Target/Specificity
MYD88;

Reconstitution & Storage
MYD88 antibody can be stored at 4℃ for three months and -20℃, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions
MYD88 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

MYD88 Antibody - Protein Information

MYD88 Antibody - Protocols

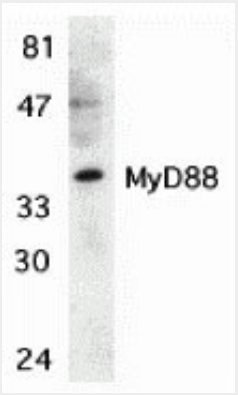
Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot

10320 Camino Santa Fe, Suite G
San Diego, CA 92121
Tel: 858.875.1900 Fax: 858.875.1999

- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

MYD88 Antibody - Images



Western blot analysis of MyD88 in Jurkat whole cell lysate with MyD88 antibody at 0.5 µg/mL.

MYD88 Antibody - Background

MYD88 Antibody: The pro-inflammatory cytokine IL-1 induced cellular response requires IL-1 receptor complex including IL-1RI and IL-1RAcP. Recently, MyD88 was identified as an adapter molecule in the IL-1 signaling pathway. MyD88 associates with and recruits IRAK to the IL-1 receptor complex in response to IL-1 treatment and dominant negative form of MyD88 attenuates IL-1R-mediated NF-κB activation. MyD88 is also employed as a regulator molecule by IL-18 receptor and human Toll receptor, which are members in the Toll/IL-1R family of receptors. Targeted disruption of the MyD88 gene results in lose of cellular responses to IL-1 and IL-18, and MyD88-deficient mice lack responses to bacterial product LPS that employs Toll-like receptors 2 and 4 (TLR2 and TLR4) as the signaling receptors. MyD88 is a general adapter protein for the Toll/IL-1R family of receptors and plays an important role in the inflammatory response induced by cytokines IL-1 and IL-18 and endotoxin. MyD88 gene is expressed in many tissues.
