

# WNV Core Antibody

Catalog # ASC10286

## Specification

# WNV Core Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Application Notes

E <u>P06935</u> <u>NP\_776011</u>, <u>27735299</u> Virus Rabbit Polyclonal IgG WNV Core antibody can be used for the detection of the WNV Core protein in ELISA. It will detect 10 ng of free peptide at 1 μg/mL.

# WNV Core Antibody - Additional Information

Gene ID 912267 Other Names WNV Core Antibody : Genome polyprotein, Core protein, NS1, Anchored core protein C

Target/Specificity WNVgp1;

#### **Reconstitution & Storage**

WNV Core antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

#### Precautions

WNV Core Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

# WNV Core Antibody - Protein Information

#### Name POLG

#### Function

[Capsid protein C]: Plays a role in virus budding by binding to the cell membrane and gathering the viral RNA into a nucleocapsid that forms the core of a mature virus particle (By similarity). During virus entry, may induce genome penetration into the host cytoplasm after hemifusion induced by the surface proteins (By similarity). Can migrate to the cell nucleus where it modulates host functions (By similarity). Overcomes the anti-viral effects of host EXOC1 by sequestering and degrading the latter through the proteasome degradation pathway (PubMed:<a href="http://www.uniprot.org/citations/23522008" target="\_blank">23522008</a>).

### **Cellular Location**

[Capsid protein C]: Virion {ECO:0000250|UniProtKB:P17763}. Host nucleus {ECO:0000250|UniProtKB:P17763}. Host cytoplasm. Host cytoplasm, host perinuclear region [Small envelope protein M]: Virion membrane {ECO:0000250|UniProtKB:P03314}; Multi-pass membrane protein {ECO:0000250|UniProtKB:P03314}. Host endoplasmic reticulum membrane {ECO:0000250|UniProtKB:P03314}; Multi-pass membrane protein. Note=ER membrane retention is mediated by the transmembrane domains. {ECO:0000250|UniProtKB:P03314} [Non-structural protein 1]: Secreted {ECO:0000250|UniProtKB:P17763}. Host endoplasmic reticulum membrane: Peripheral membrane protein; Lumenal side {ECO:0000250|UniProtKB:P17763}. Note=Located in RE-derived vesicles hosting the replication complex. {ECO:0000250|UniProtKB:Q9Q6P4} [Serine protease subunit NS2B]: Host endoplasmic reticulum membrane; Multi-pass membrane protein {ECO:0000250|UniProtKB:P17763} [Non-structural protein 4A]: Host endoplasmic reticulum membrane {ECO:0000250|UniProtKB:P14335}; Multi-pass membrane protein {ECO:0000250|UniProtKB:P17763}. Note=Located in RE-associated vesicles hosting the replication complex {ECO:0000250|UniProtKB:P17763} [RNA-directed RNA polymerase NS5]: Host endoplasmic reticulum membrane; Peripheral membrane protein; Cytoplasmic side. Host nucleus. Host cytoplasm {ECO:0000250|UniProtKB:P14335}. Note=Located in RE-associated vesicles hosting the replication complex. NS5 protein is mainly localized in the nucleus rather than in ER vesicles (By similarity) Shuttles between the cytoplasm and nucleus (By similarity) {ECO:0000250|UniProtKB:P14335, ECO:0000250|UniProtKB:P17763}

### WNV Core Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- <u>Cell Culture</u>

# WNV Core Antibody - Background

WNV Core Antibody: West Nile Virus (WNV) is a member of the Flaviviridae, a plus-stranded virus family that includes St. Louis encephalitis virus, yellow fever virus, and Dengue virus. WNV was initially isolated in 1937 in the West Nile region of Uganda and has become prevalent in Africa, Asia, and Europe. It has rapidly spread across the United States with cases being observed in every continental state. Virus particles consist of a dense core made up of the core/capsid protein encapsulating the RNA genome surrounded by a membrane envelope embedded with envelope and matrix proteins which play a major role for WNV entry into target cells. The viral core protein is thought to contribute to the WNV-associated inflammation via apoptosis induced though the caspase-9 pathway as delivery of core gene delivery into the striatum of mouse brain and skeletal muscle resulted in cell death and inflammation.
