

**Avian Influenza Nonstructural Protein 2 Antibody**  
**Catalog # ASC10459****Specification**

---

**Avian Influenza Nonstructural Protein 2 Antibody - Product Information**

Application	E
Primary Accession	<a href="#">Q2L6Z2</a>
Other Accession	<a href="#">ABC72654</a> , <a href="#">85680916</a>
Reactivity	Virus
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	Avian Influenza Nonstructural Protein 2 antibody can be used for the detection of the Avian Influenza Nonstructural Protein 2 protein from influenza A in ELISA.

**Avian Influenza Nonstructural Protein 2 Antibody - Additional Information****Other Names**

Avian Influenza Nonstructural Protein 2 Antibody: , nonstructural protein 2

**Reconstitution & Storage**

Avian Influenza Nonstructural Protein 2 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

Avian Influenza Nonstructural Protein 2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Avian Influenza Nonstructural Protein 2 Antibody - Protein Information****Avian Influenza Nonstructural Protein 2 Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

## **Avian Influenza Nonstructural Protein 2 Antibody - Background**

Avian Influenza Nonstructural Protein 2 Antibody: Influenza A virus is a major public health threat, killing more than 30, 000 people per year in the USA. Novel influenza virus strains caused by genetic drift and viral recombination emerge periodically to which humans have little or no immunity, resulting in devastating pandemics. Influenza A can exist in a variety of animals; however, it is in birds that all subtypes, including the so-called "avian flu" or H5N1, can be found. These subtypes are classified based on the combination of the virus coat glycoproteins hemagglutinin (HA) and neuraminidase (NA) subtypes. One of the less studied proteins encoded by the influenza virus is the nonstructural protein (NS) 2. NS2 binds to the influenza matrix protein M1 that is bound to the ribonucleoprotein (RNP) complex and mediates the contact between the M1/RNP complex and the cellular exportin CRM, but does not interact with nucleosomes.
