

Rkhd2 Antibody
Catalog # ASC10788**Specification**

Rkhd2 Antibody - Product Information

Application	WB
Primary Accession	Q5U5Q3
Other Accession	NP_057710 , 148229134
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	Rkhd2 antibody can be used for detection of Rkhd2 by Western blot at 0.5 - 1 µg/mL.

Rkhd2 Antibody - Additional Information

Gene ID	51320
Target/Specificity	
MEX3C;	

Reconstitution & Storage

Rkhd2 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

Rkhd2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Rkhd2 Antibody - Protein Information

Name MEX3C

Synonyms RKHD2, RNF194

Function

E3 ubiquitin ligase responsible for the post-transcriptional regulation of common HLA-A allotypes. Binds to the 3' UTR of HLA-A2 mRNA, and regulates its levels by promoting mRNA decay. RNA binding is sufficient to prevent translation, but ubiquitin ligase activity is required for mRNA degradation.

Cellular Location

Cytoplasm. Nucleus. Note=Predominantly expressed in the cytoplasm and shuttles between the cytoplasm and the nucleus through the CRM1 export pathway. May act as suppressor of replication stress and chromosome missegregation

Tissue Location

Highest levels found in fetal brain and testis. Also expressed in thymus, salivary gland and uterus.

Highly expressed in cells of the innate immune system, in particular activated NK cells. Weak expression in the intestine.

Rkhd2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Rkhd2 Antibody - Images

Western blot analysis of Rkhd2 in rat heart tissue lysate with Rkhd2 antibody at (A) 0.5 μ g/mL and (B) 1 μ g/mL.

Rkhd2 Antibody - Background

Rkhd2 Antibody: Rkhd2, also known as MEX3C is a member of a novel family of four homologous human MEX3 proteins each containing two heterogeneous nuclear ribonucleoprotein K homology (KH) domains and one carboxy-terminal RING finger module. MEX3 proteins, including Rkhd2, are phosphoproteins that bind RNA through their KH domains and shuttle between the nucleus and the cytoplasm via the CRM1 export pathway. These proteins are a novel family of evolutionarily conserved RNA-binding proteins, differentially recruited to P bodies and potentially involved in post-transcriptional regulatory mechanisms. It has been suggested that genetic variations in Rkhd2 may be associated with susceptibility to essential hypertension type 8. Rkhd3 and Rkhd4, but not Rkhd2, co-localize with both the hDcp1a decapping factor and Argonaute (Ago) proteins in processing bodies (P bodies), recently characterized as centers of mRNA turnover.
