

MettL7B Antibody

Catalog # ASC10801

Specification

MettL7B Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Application Notes IF <u>O6UX53</u> NP_689850, 196410 Human, Mouse Rabbit Polyclonal IgG MettL7b antibody can be used for detection of mettl7b by Western blot at 1 -2 μg/mL. Antibody can also be used for immunohistochemistry starting at 2.5 μg/mL.

MettL7B Antibody - Additional Information

Gene ID Target/Specificity

196410

MettL7B antibody was raised against a 13 amino acid synthetic peptide near the amino terminus of human MettL7B.

Reconstitution & Storage

MettL7B antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

MettL7B Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

MettL7B Antibody - Protein Information

Name TMT1B {ECO:0000303|PubMed:37137720, ECO:0000312|HGNC:HGNC:28276}

Function

Thiol S-methyltransferase that catalyzes the transfer of a methyl group from S-adenosyl-L-methionine to alkyl and phenolic thiol- containing acceptor substrates. Together with TMT1B accounts for most of S-thiol methylation activity in the endoplasmic reticulum of hepatocytes. Selectively methylates S-centered nucleophiles from metabolites such as hydrogen sulfide and dithiothreitol.

Cellular Location

Endoplasmic reticulum membrane {ECO:0000250|UniProtKB:Q562C4}; Peripheral membrane protein {ECO:0000250|UniProtKB:Q562C4}. Lipid droplet {ECO:0000250|UniProtKB:Q562C4}. Microsome. Cytoplasm, cytosol. Note=Highly concentrated in the perinuclear area of the

endoplasmic reticulum (ER) and surrounding lipid droplets. May be associated with the specific regions of the LR that form lipid droplets and targeted to the initial deposits of lipids where the lipid droplets form. {ECO:0000250|UniProtKB:Q562C4}

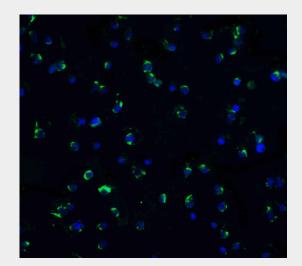

Tissue Location Expressed in the liver.

MettL7B Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

MettL7B Antibody - Images

Immunofluorescence of DR3 in Jurkat cells with DR3 antibody at 5 μ g/ml.

MettL7B Antibody - Background

MettL7B Antibody: MettL7B belongs to the methyltransferase superfamily. It is a probable methyltransferase. Methyltransferase is a type of transferase enzyme which transfers a methyl group from a donor to an acceptor. Often methylation occurs on nucleic bases in DNA or amino acids in protein structures. DNA methylation is often utilized to silence and regulate genes without changing the original DNA sequence. DNA methylation may be necessary for normal growth from embryonic stages in mammals. When mutant embryonic stem cells lacking the murine DNA methyltransferase gene were introduced to a germline of mice they caused a recessive lethal phenotype. Methylation may also be linked to cancer development as methylation of tumor suppressor genes promotes tumorgenesis and metastasis.
