

TMEM38A Antibody

Catalog # ASC11030

Specification

TMEM38A Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host

Clonality Isotype

Application Notes

WB. IF **09H6F2**

AAH01195, 12654711 Human, Mouse, Rat

Rabbit Polyclonal

laG

TMEM38A antibody can be used for

detection of TMEM38A by Western blot at 1 μg/mL. For immunofluorescence start at 20

μg/mL.

TMEM38A Antibody - Additional Information

Gene ID 79041

Target/Specificity

TMEM38A;

Reconstitution & Storage

TMEM38A antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

TMEM38A Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

TMEM38A Antibody - Protein Information

Name TMEM38A

Monovalent cation channel required for maintenance of rapid intracellular calcium release. May act as a potassium counter-ion channel that functions in synchronization with calcium release from intracellular stores.

Cellular Location

Sarcoplasmic reticulum membrane {ECO:0000250|UniProtKB:A5A6S6}; Multi-pass membrane protein {ECO:0000250|UniProtKB:A5A6S6}. Nucleus membrane {ECO:0000250|UniProtKB:A5A6S6}

TMEM38A Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

TMEM38A Antibody - Images

Western blot analysis of TMEM38A in rat skeletal muscle tissue lysate with TMEM38A antibody at $1 \mu g/mL$ in (A) the absence and (B) the presence of blocking peptide.

Immunofluorescence of TMEM38A in mouse skeletal muscle tissue with TMEM38A antibody at 20 μ g/mL.

TMEM38A Antibody - Background

TMEM38A Antibody: TMEM38A and TMEM38B are two recently identified trimeric intracellular cation (TRIC) channel subtypes. TMEM38A is preferentially expressed in excitable tissues such as

Tel: 858.875.1900 Fax: 858.875.1999

striated muscle and brain and localizes to the sarcoplasmic reticulum (SR) in muscle tissues. Mice deficient in both TMEM38A and TMEM38B suffer embryonic cardiac failure; the cardiac myocytes display severe dysfunction in SR Ca2+ handling, weakened Ca2+ release, and reduced K+ permeability indicating that the TRIC cation channels are likely to act as counter-ion channels that function in synchronization with Ca2+ release from intracellular stores. Other experiments have shown that TMEM38A and TMEM38B can act with junctophilin proteins to support efficient ryanodine receptor-mediated Ca2+ release in muscle cells.
