**Application Notes** 

WB, IHC, IF

P23771

NP\_001002295, 50541959 Human, Mouse, Rat

Rabbit Polyclonal

IqG

Predicted: 49 kDa

Observed: 49 kDa KDa

GATA3 antibody can be used for detection of GATA3 by Western blot at  $1 - 2 \mu g/mL$ .

Antibody can also be used for

immunohistochemistry starting at 2.5 µg/mL. For immunofluorescence start at 20

μg/mL.

## **GATA3 Antibody - Additional Information**

Gene ID
Target/Specificity
GATA3:

2625

## **Reconstitution & Storage**

GATA3 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

## **Precautions**

GATA3 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## **GATA3 Antibody - Protein Information**

#### Name GATA3

#### **Function**

Transcriptional activator which binds to the enhancer of the T-cell receptor alpha and delta genes. Binds to the consensus sequence 5'-AGATAG-3'. Required for the T-helper 2 (Th2) differentiation process following immune and inflammatory responses. Positively regulates ASB2 expression (By similarity). Coordinates macrophage transcriptional activation and UCP2-dependent metabolic reprogramming in response to IL33. Upon tissue injury, acts downstream of IL33 signaling to drive differentiation of inflammation-resolving alternatively activated macrophages.

**Cellular Location** Nucleus.

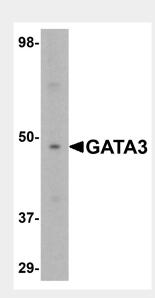

**Tissue Location**T-cells and endothelial cells.

## **GATA3 Antibody - Protocols**

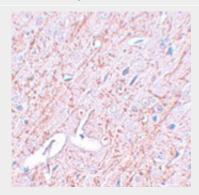

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## **GATA3 Antibody - Images**

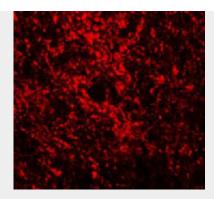

Western blot analysis of GATA3 in K562 cell lysate with GATA3 antibody at 1 µg/mL.

Immunohistochemistry of GATA3 in rat brain tissue with GATA3 antibody at 2.5 μg/mL.

Immunofluorescence of GATA3 in Rat Brain tissue with GATA3 antibody at 20 µg/mL.

## **GATA3 Antibody - Background**

GATA3 Antibody: GATA3 is a zinc finger transcription factor that was first recognized as a possible determinant of T cell development. Later studies demonstrated that it is expressed in trophoblast giant cells and regulates trophoblast-specific genes during development. Specifically, GATA3 is selectively expressed in the trophectoderm of the peri-implantation embryo and regulates CDX2, which is required for the transcriptional repression of the POU5F1/Oct4 and NANOG genes and is thus essential for the segregation of the inner cell mass and trophectoderm at the blastocyst stage. Decreased or null-expression expression of GATA3 has also been suggested to play a major role in the development and progression of luminal breast cancer.
